QUESTION 1

A Sterling Connect:Direct administrator is attempting to configure two nodes, PNODE and SNODE to use Connect:Direct Secure+ to securely transfer files.

During the test, the administrator was able to review a trace and obtained the following trace Information:

During the test, the administrator was able to review a trace and obtained the following trace Information:

- PNODE sends a ClientHello message
- SNODE responds with a ServerHello
- SNODE sends certificate
- SNODE request certificate from the client
- SNODE sends a ServerHelloDone
- PNODE responds with a Certificate - immediate failure after this point.

Errors
SNODE:

CSPA311E - SSL certificate verification failed.
CSPA201E - Secure+ initialization failure.
CSPA309E - The SSL library returned an error during the handshake

PNODE:

CSPA309E - The SSL library returned an error during the handshake

What is the most likely cause of the problem?

A. The SNODE has not enabled Secure+ for the PNODE.

B. Either the PNODE or the SNODE is attempting to do Common Name verification.

C. The PNODE does not have the Certificate Authority (CA) root certificate for SNODE in the CA trusted file.

D. The SNODE does not have the Certificate Authority (CA) root certificate for PNODE in the CA trusted file.

Correct Answer: D

QUESTION 2

A Sterling Connect:Direct for UNIX administrator has successfully installed and configured Connect:Direct File Agent. The administrator then copied production files into the watch directory to be processed, but was notified later that day that the files have not been transferred to their appropriate clients. Upon inspection the administrator discovered that File Agent was never started. After File Agent was started the administrator noticed that the files were still not processed. What action must be performed before the files can be processed?

A. A shutdown and restart of File Agent.

B. A rm command on the files in the watch directory.

C. A touch command on the files in the watch directory.

D. A cat files | wc command on the files in the watch directory.

Correct Answer: C

QUESTION 3

Which field can be used as another level of authentication during validation of the certificate in a SSL/TLS handshake?

A. Country

B. Organizational

C. Email Address

D. Common Name

Correct Answer: D

QUESTION 4

An existing fix has been identified and downloaded to resolve an issue reported for Sterling Connect:Direct for Windows. What is the correct method to apply the maintenance pack?

A. Execute the maintenance file.

B. Open the maintenance file from the Requester.

C. Open the maintenance file from the Admin tool.

D. Go to Windows Control Panel > Add or Remove Programs.

Correct Answer: A

QUESTION 5

A user wants to setup a file transfer to another location. The file is very large and so the decision was made to enable checkpointing. What performance impact, if any, will the checkpoint interval have on a COPY step?

A. Setting the checkpoint initialization parameter to 10240K always provides the best performance.

B. A larger checkpoint interval is more effective, because it adds less overhead to the protocol exchange between the nodes.

C. A smaller checkpoint interval is more effective, because less memory is used to cache data sent since the last checkpoint.

D. The checkpoint interval has no effect on the performance of a COPY step.

Correct Answer: B
