QUESTION 1

A system administrator is reviewing a checklist of actions that should occur during the federation process. The system administrator notes that all of the following checklist actions are correct EXCEPT:

- A. The node is added to the cell
- B. The node agent and application server are started
- C. The application server becomes a managed server in the cell
- D. The application server is stopped, and a new node agent is created.

Correct Answer: B

QUESTION 2

A problem has been reported to a system administrator, however the system administrator is unable to use the Log Analyzer for some reason. Which of the following is an alternative way for the system administrator to review the Log Analyzer log file?

- A. Use the dumplog command.
- B. Use the showin command
- C. Use any text editor although the formatting wont be as nice.
- D. Format the Log Analyzer log with wsadmin and then use any text editor.

Correct Answer: B

QUESTION 3

A system administrator has just installed the WebSphere Application Server. The system administrator is interested in turning on global security in order to protect the environment. By enabling global security, all of the following security features will be activated EXCEPT:

- A. Common Secure interoperability Version 2 (CSIV2)
- B. Authentication to the administrative console
- C. SSL between the plug-in and the embedded Web server
- D. J2EE security

Correct Answer: C

QUESTION 4

A system administrator is asked to diagnose a problem on a remote node using the Log Analyzer.

In order to accomplish this task, what is the name of the Log Analyzer source log file that the system administrator will have to access?

- A. service.log
- B. activity.log
- C. loganalyzer.log
- D. trace.log

Correct Answer: B

QUESTION 5

A system administrator is installing an enterprise application containing several entity EJBs. All EJBs are contained in the same EJB JAR file. All CMP EJBs in the JAR file, except one, access the samedatasources.

What is the MOST efficient way to bind the datasources for the EJBs?

- A. Create a separate EJB JAR file for the EJB that is different and set EJB module datasources on both EJB JARs.
- B. Ask developers to pre-configure the EJB module with the production datasource JNDI names.
- C. Individually, bind each of the EJBs to the datasource they use.
- D. Bind the EJB module to the datasource used by most EJBs, then specify a separate binding for the EJB that is different

Correct Answer: D
