A developer is tasked with creating canister alerts that warn of unindexed session counts growing to over 500. Which alert function should be selected in the alert creation dialog?

- A. System
- B. Positive
- C. Negative
- D. Canister Default

Correct Answer: B

QUESTION 4

A developer has a business process that has been defined in a scorecard. The scorecard functions as expected and shows grades for each subsequent step as well as the overall completion of the process, abandonment and failure of key

steps. During the weekend the e-commerce team has applied a release that made a few modifications to the checkout process.

The changes included:

-New Tags for the Tag management system.

-

A new set of images for the site.

-

A change in the CSS file that controls the formatting of the checkout form.

-

A change in the cart checkout function timeout.

Although other site functionalities have not changed, and there have been no increases in user complaints, the abandonment rate as reported by the scorecard has tripled. What could be the cause of this change in the scorecard abandonment rate?

- A. The new tags are interfering with checkout completion.
- B. The end process event has been invalidated by the page image changes.
- C. The new application timeout does not equal the canister session idle timeout.
- D. The CSS file changes are interfering with the processing of the checkout page.

Correct Answer: C

QUESTION 5

A business analyst creates a session-level event and looks for it in the active session list in the portal. It does not appear in the list. What is preventing the event from showing up in the active session list?

- A. The event property contains a Label.
- B. The event property is defined for "Every Hit?"
- C. The event requires more than one condition to fire.
- D. The event property is defined as an end of session event.
