## QUESTION 1

To enforce the Security Policy correctly, a Security Gateway requires:

- A. a routing table
- B. awareness of the network topology
- C. a Demilitarized Zone
- D. a Security Policy install

Correct Answer: B

The network topology represents the internal network (both the LAN and the DMZ) protected by the gateway. The gateway must be aware of the layout of the network topology to:

Correctly enforce the Security Policy.

Ensure the validity of IP addresses for inbound and outbound traffic.

Configure a special domain for Virtual Private Networks.

- A. Jon is currently editing rule no.6 but has Published part of his changes.
- B. Dave is currently editing rule no.6 and has marked this rule for deletion.
- C. Dave is currently editing rule no.6 and has deleted it from his Rule Base.
- D. Jon is currently editing rule no.6 but has not yet Published his changes.

Correct Answer: D

When an administrator logs in to the Security Management Server through SmartConsole, a new editing session starts. The changes that the administrator makes during the session are only available to that administrator. Other administrators see a lock icon on object and rules that are being edited. To make changes available to all administrators, and to unlock the objects and rules that are being edited, the administrator must publish the session.
