QUESTION 1

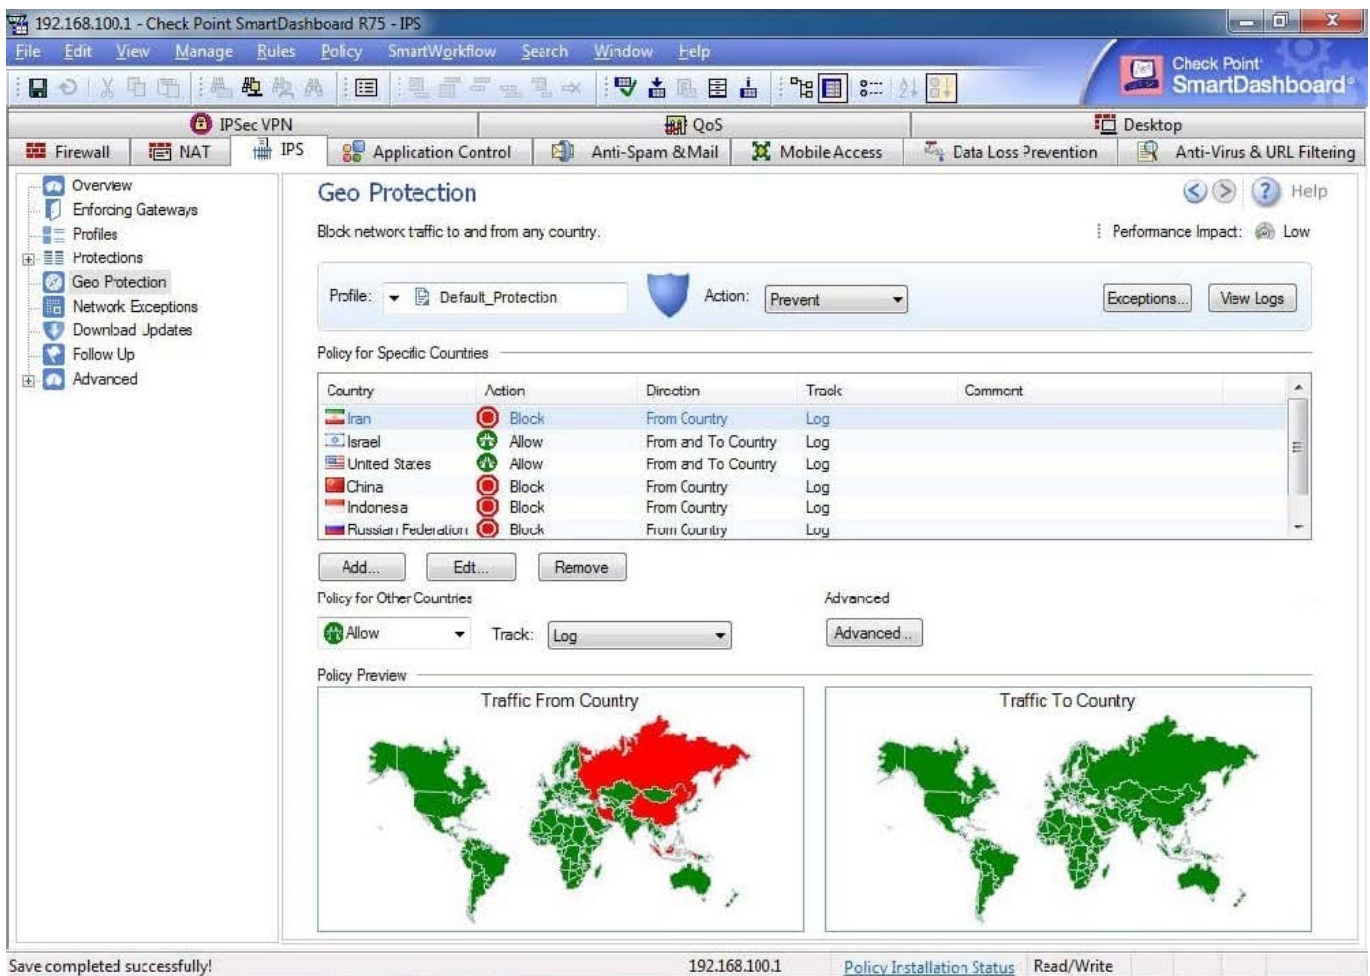

Sensitive corporate data is uploaded to ThreatCloud:

- A. When the administrator manually sends suspected traffic to ThreatCloud for inspection.
- B. Never
- C. When the administrator configures the sensor to be a SensorNET participant.
- D. After the bot attack has been confirmed.

Correct Answer: B

QUESTION 2

This graphic shows traffic being blocked from certain countries.

What is the deciding factor for this?

- A. The traffic from selected countries is being blocked because of an IPS traffic-type rule in the rulebase

- B. The traffic from selected countries is being blocked because it is overloading the Gateway
- C. The traffic from selected countries is being blocked due to the GeoProtection ruleset
- D. The traffic from selected countries is being blocked due to IPS-detected specific attacks originating there

Correct Answer: C

QUESTION 3

Which of these is a Check Point Firewall attribute?

- A. Malicious P2P application protection
- B. Buffer overflow prevention
- C. Worm injection blocking
- D. Granular access control

Correct Answer: D

QUESTION 4

In SmartViewTracker, you see a log record of type "control" and severity "critical" for the product "Threat Emulation" which says:

"cloud emulation failed. Reason: failed to authenticate gateway..."

What is likely to be the reason for this failure?

- A. The user provided the wrong credentials to the gateway
- B. The gateway should be configured in a way that Threat Emulation can be done locally in case the cloud is not accessible
- C. The cloud is not accessible right now
- D. Verify the gateway license / contract

Correct Answer: D

QUESTION 5

What is the most common way a computer can become infected with a bot?

- A. Malvertising
- B. Users accessing malicious web sites

C. Adobe file vulnerabilities

D. Microsoft file vulnerabilities

Correct Answer: B
