QUESTION 1

Scenario: Users complain that it is taking significantly longer to see their Desktop OS machines compared to yesterday. The Helpdesk team is able to see active connections while the users are waiting. What could a Citrix Administrator view to compare the Desktop OS machine launch times?

- A. AAA logs in NetScaler Gateway
- B. Event log on the Citrix StoreFront server
- C. Logon duration details from Citrix Director
- D. Configuration logging report on Citrix Studio

Correct Answer: C

QUESTION 2

Accessing Desktop OS machines in the morning sometimes takes up to 15 minutes from the initial launch attempt up to the point where the Desktop OS machines are ready for use. What could a Citrix Administrator do to resolve this issue?

- A. Add more Delivery Controllers to balance the load.
- B. Execute the Set-BrokerPrivateDesktop PowerShell cmdlet.
- C. Add more hosting resources to support the Desktop OS machine load.
- D. Configure Power Management to start all Desktop OS machines before the morning shift starts.

Correct Answer: D

QUESTION 3

Scenario: A Citrix Administrator configures a profile management policy in Citrix Studio for the members of a particular organizational unit (OU). The administrator must verify that the filter is applied correctly to the newly created policy. How could the administrator verify that the filter is correctly applied?

- A. Using the Modeling Wizard
- B. Using a Policy Template Comparison
- C. Running rsop.msc on the Delivery Controller
- D. Running gpresult /v from the command line

Correct Answer: A

QUESTION 4

What should a Citrix Administrator do to ensure that a vDisk is properly load balanced across multiple Provisioning Services servers in an environment where the Streaming Service is working properly?

- A. Go to the vDisk properties to ensure that load balancing is set.
- B. Rebalance the target devices across the Provisioning Services servers.
- C. Create a separate store and assign servers from different sites to load balance the vDisk.
- D. Check the association of the servers to a site to ensure all servers are configured to separate sites.

Correct Answer: B

QUESTION 5

Scenario: When users log on, their Desktop OS machines launch automatically in full screen. These users have to log out of their Desktop OS machine to access their hosted applications. How could a Citrix Administrator prevent the Desktop OS machines from launching automatically in full screen mode?

- A. Update Citrix Receiver.
- B. Modify the default desktop viewer setting.
- C. Reconfigure the web.config file for the appropriate store.
- D. Configure an auto-launch policy on the Delivery Controller.

Correct Answer: C
