QUESTION 1

Scenario: A Citrix Engineer is designing a Provisioning Services environment based on the following environmental factors:

- A large number of target devices are spread over multiple subnets.
- The subnets include non-Provisioning Services machines that rely on starting up over the network
- A security mandate prohibits the use of TFTP.
- Provisioning Services 7.6 Update 1 is being used to maintain LTSR compliance.

Which Provisioning Services boot method is appropriate for the target devices?

- A. BDM ISO
- B. DHCP Options
- C. BIOS Embedded
- D. BDM Disk Partition

Correct Answer: C

QUESTION 2

Scenario: The XenApp farm consists of two zones, each located in a different datacenter. After some recent maintenance by the network team, the administrator discovers that the load balancing across the datacenters is NOT working.

The most likely cause for the load balancing issue is that the firewall has started blocking the _____. (Complete the sentence with the correct option.)

- A. IMA traffic between the datacenters.
- B. XML traffic between the datacenters.
- C. data store traffic between the datacenters.
- D. Session Reliability traffic between the datacenters.

Correct Answer: A

QUESTION 3

Scenario: An application that renders locally and creates a large number of temporary files on the local drive is installed on the Desktop OS machines. A Citrix Engineer creates a vDisk in Private mode with this application installed. The engineer is in the process of updating a vDisk from Private mode to Standard mode and needs to determine the write cache type.

Which cache type would provide the best performance in this scenario?

- A. Cache on server
- B. Cache on server persisted
- C. Cache in device RAM with overflow on hard disk
- D. Cache on device hard drive

Correct Answer: C

QUESTION 4

Scenario: An administrator wishes to add disaster recovery capability to an existing XenApp environment.

The administrator built some new servers into a disaster recovery datacenter that has a 1 GB link to the production datacenter.

How should the administrator configure the new servers for users?

- A. Add the servers to the existing farm in the same zone and use a custom load evaluator.
- B. Add the servers to the existing farm in the same zone and use a worker group and load balancing policy.
- C. Add the servers to a new farm and use the site failover feature of Web Interface to provide access to the servers.
- D. Add the servers to the existing farm into a new disaster recovery zone and use a preferential load balancing policy.

Correct Answer: B

QUESTION 5

What are two benefits of creating a centralized vDisk Store? (Choose two.)

- A. Does NOT require vDisk files to be replicated
- B. Minimizes the storage requirement for vDisks
- C. Allows for the use of differencing disks
- D. Provides redundancy without further configuration

Correct Answer: AB
