QUESTION 1

Why is configuring regional shared storage locations on a CIFS server using DNS Round Robin the best design choice for vDisk storage?

- A. It is the least expensive solution.
- B. It is a highly scalable and resilient solution.
- C. It creates the least amount of administrative overhead.
- D. It reduces the system footprint.

Correct Answer: C

QUESTION 2

Scenario: The company is designing a cost-efficient environment for the call center workers. The IT department is replacing the existing thin clients with newer models.

What are the benefits of using Hosted VDI and manually installing the operating system?

- A. Highest user density and lowest cost
- B. Highest level of user personalization
- C. Lowest storage performance requirement and highest user density
- D. Lowest cost and highest application compatibility

Correct Answer: B

QUESTION 3

Scenario:

CGE is experiencing numerous issues with its existing profile management solution. The Citrix Architect managing the project is tasked with designing a solution that alleviates existing issues and, if possible, minimizes the loss of existing customizations. Configuration changes need to be implemented quickly and with minimal complexity.

Why does enabling '\\Profile streaming\\' when configuring Citrix Profile management without folder redirection benefit CGE's Sales end-user group?

- A. It allows faster logons.
- B. It simplifies home drive cleanup.

- C. It minimizes the required storage needed for folder redirection.
- D. It improves application performance.

Correct Answer: D

QUESTION 4

How should the architect implement database high availability in an Oracle database?

- A. By using Oracle RAC
- B. By using Oracle DataGuard
- C. By using Oracle FailSafe
- D. By using Oracle Automatic Storage Management

Correct Answer: C

QUESTION 5

Scenario: CGE decided to virtualize its infrastructure workloads and provide a virtual solution to all end users. The infrastructure workloads include Delivery Controllers, StoreFront servers, License Servers, and Microsoft SQL Servers for databases. Why is creating a resource pool comprising a maximum of 32 XenServer hosts, using a virtual disk storage repository for XenMotion and high availability, and replicating and performing backups for the meta information the best design solution?

- A. It addresses all customer requirements by ensuring appropriate design of resource pools, high availability for critical workloads, and a new storage solution for disaster recovery purposes.
- B. It ensures simple setup with a built-in failover design.
- C. It allows virtual workloads to fail over to a failover site for disaster recovery purposes.
- D. It optimizes performance and provides centralized management.

Correct Answer: A
