**QUESTION 1**

Scenario: A server farm consists of servers with 8 GB and 16 GB of RAM. The administrator wants to ensure that the servers with 16 GB of RAM receive more sessions than the 8 GB servers.

In order to distribute the session load equitably among both types of servers, the administrator could assign the \_\_\_\_\_. (Choose the correct option to complete the sentence.)

- A. default load evaluator rule to all servers
- B. advanced load evaluator rule to all servers
- C. default load evaluator rule to all 16 GB servers
- D. advanced load evaluator rule to all 16 GB servers

Correct Answer: B

---

**QUESTION 2**

Users in an environment need to be able to open Microsoft Office documents using the software installed on the XenApp server even if the user has NOT started a Citrix session.

What must the administrator configure to meet the requirements of the scenario?

- A. Offline streaming
- B. File Type Association
- C. Host (server) to client redirection
- D. Client to host (server) redirection

Correct Answer: D

---

**QUESTION 3**

Scenario: A server farm has three policies applied with the User filter.

Policy A (priority 1) allows domain users to access network, client and removable drives.No other settings are configured.

Policy B (priority 2) allows domain users to access optical drives. No other settings are configured.

Policy C (priority 3) denies domain users access to client and removable drives. No other settings are configured.

Which drives will be available to domain users in the environment?

- A. No drives
- B. Optical drives

- C. Network and optical drives
- D. Network, client and removable drives
- E. Network, client, removable and optical drives

Correct Answer: E

---

#### QUESTION 4

Scenario: An administrator plans to add printer drivers to the auto-replication list in a XenApp 6.5 environment. The administrator needs to ensure that a specific vendor printer driver is available on all servers in the farm including any new servers that are added at a later date.

How must the administrator add printer drivers to the auto-replication list?

- A. Through a Citrix policy
- B. With a PowerShell cmdlet
- C. With the PrintCfg.exe tool
- D. In a per-server registry setting

Correct Answer: B

---

#### QUESTION 5

Scenario: An administrator needs to deliver an application to 1,500 user devices in the local network. The application will be delivered from a XenApp server farm consisting of 50 XenApp servers. When choosing how to deliver the application, the administrator must keep in mind that the user devices have little hard drive space and limited memory resources, the user devices will always be connected to the network and the application is updated often.

Which setting should the administrator choose when publishing the application?

- A. Streamed to client
- B. Streamed to server
- C. Installed application
- D. Streamed if possible, otherwise accessed from a server

Correct Answer: B
