**QUESTION 1**

Scenario: A company recently upgraded all their Citrix licenses from XenApp Enterprise to XenApp Platinum. The Citrix License Server has been correctly updated and configured with the correct Citrix license files. Now users are NOT able to connect.

Which step should the administrator take to allow users to connect again?

- A. Restart the server hosting the Citrix data store.
- B. Upgrade the Delivery Services Console to the AppCenter.
- C. Update the XenApp product edition in the Computer policy.
- D. Restart all Citrix servers reporting 20,000 as their current load.

Correct Answer: C

---

**QUESTION 2**

Scenario: A company's Senior Citrix Administrator requested that an administrator reconfigure the printing policies in a test XenApp 6.5 farm. The Citrix Universal Printer Driver will be used exclusively and the number of auto-created printers on the server should be kept to a minimum to conserve resources.

Which two policies should the administrator configure to meet these requirements? (Choose two.)

- A. Disable the client printer redirection policy.
- B. Enable the policy for the generic universal printer.
- C. Enable the policy for the printing preview preference.
- D. Configure the auto-create client printers policy so that client printers are NOT auto-created.
- E. Configure the printer driver mapping and compatibility policy to map all drivers to the Citrix Universal Printer Driver.

Correct Answer: BD

---

**QUESTION 3**

Scenario: The administrator of a small XenApp server farm has configured end-to-end data encryption between the XenApp servers and user devices by setting up Access Gateway VPX. Session Reliability is enabled in the farm with default settings.

Over which port will published applications be delivered?

- A. 80
- B. 443
- C. 1494

D. 2598

Correct Answer: B

---

**QUESTION 4**

Scenario: An administrator manages a server farm containing nine servers. The servers are organized into three worker groups based on the geographic location of the users accessing the applications. Users in all

geographic locations are accessing the applications in the server farm 24 hours a day, seven days a week.

The administrator would like to restart the servers on a regular basis.

Which two tasks should the administrator perform to automate the restarting of the servers without

impacting user access? (Choose two.)

- A. Create zones for the servers in each worker group.
- B. Configure reboot policies and apply them to the appropriate worker groups.
- C. Create three worker groups containing a server from each existing worker group.
- D. Configure the Health Monitoring policy and apply it to the appropriate worker groups.
- E. Configure the Citrix IMA Service test to restart the servers and apply it to the appropriate worker groups.

Correct Answer: BC

---

**QUESTION 5**

Scenario: A farm contains six servers with one shared data collector that has a custom load balancing policy to limit the number of connections. An administrator needs to add more users to the farm, which will result in adding on four more servers for a total of 10. As most users in the farm use a CAD application, the administrator understands that resource needs will increase.

Which step should the administrator take to maintain farm integrity?

- A. Dedicate two new servers as data collectors and set them as Most Preferred in the election panel.
- B. Dedicate one new server as the dedicated data collector and the current data collector as its backup.
- C. Dedicate three new servers as shared data collectors and assign Most Preferred in the election panel.
- D. Dedicate a new server as a second shared data collector and assign Most Preferred in the election panel.

Correct Answer: B
