QUESTION 1

Scenario: An administrator is planning a software upgrade of a NetScaler HA pair from NetScaler version

8.1 Standard Edition to version 9.2 Enterprise Edition in order to take advantage of the new features. In the current environment, the NSIP for the pair is an IPv4 address.

Which two steps must the administrator take to complete the NetScaler migration in this scenario? (Choose two.)

- A. Obtain a new NetScaler license.
- B. Enable the IPv6 protocol translation.
- C. Add the NSIP address after the HA pair has been upgraded.
- D. Ensure propagation and synchronization are disabled during migration.

Correct Answer: AD

QUESTION 2

Scenario: An administrator is managing a network environment with a stand-alone NetScaler system. The speed of the interfaces currently being used is inadequate for the amount of traffic that the NetScaler system is managing. The administrator needs to increase the available bandwidth on the system. The administrator also wants to add redundancy to the interfaces for failover.

What can the administrator do to meet the needs of this scenario with minimal change to the current network environment?

- A. Configure multiplexing.
- B. Configure link aggregation.
- C. Create a load balancing policy for the interfaces.
- D. Add a second NetScaler device and configure HA.

Correct Answer: B

QUESTION 3

Which spillover type should an administrator configure to divert SSL sessions to a backup virtual server once they exceed a specified threshold?

- A. Dynamic
- B. Redirect URL
- C. Bandwidth-based
- D. Connection-based

Correct Answer: D

QUESTION 4

Scenario: The NetScaler administrator has set up two NetScalers in HA. When the administrator checks the HA nodes, the secondary unit shows as DOWN. Details were gathered from the secondary unit and are displayed below.

ID. 0

IP Address: 12.12.44.107

Node State. NOT UP Master State. Secondary Fail-Safe Mode. OFF INC State. DISABLED Synchronization State. SUCCESS HA Propagation: ENABLED Enabled Interfaces: 1/5 1/6 1/7 1/8 Disabled Interfaces: 1/1 1/2 1/3 1/4 SSL Card status: UP HA Monitor on Interfaces: 1/6 1/7 1/8 Interfaces on which heartbeats are not seen: 1/5 1/6 Interfaces causing partial failure. 1/6

Hello Interval (msecs): 200 Dead Interval (secs): 3 Node in Secondary state for: 15 Min(s) 0 Sec(s) ID. 1 IP Address: 12.12.44.106 Node State. UP Master State. Primary Fail-Safe Mode. OFF INC State. DISABLED Synchronization State. ENABLED HA Propagation: ENABLED Enabled Interfaces: 1/5 1/6 1/7 1/8 Disabled Interfaces: 1/1 1/2 1/3 1/4 SSL Card status: UP HA Monitor on Interfaces: 1/7 1/8 Interfaces on which heartbeats are not seen: 1/5 1/6 Given this information, what could be causing Node 0 to show as NOT UP?

- A. Fail-Safe mode is off.
- B. The node IDs are not the same.
- C. Interface 1/6 is not receiving HA heartbeat packets.
- D. Interface 1/5 is not receiving HA heartbeat packets.
- E. The secondary unit always shows as down until there is a failover.

Correct Answer: C

QUESTION 5

Scenario: An administrator needs to configure load balancing for a web farm so that traffic will NOT be dropped when the virtual server is marked down. Route Health Injection (RHI) and GSLB are NOT configured in this environment.

The administrator can configure _____ or _____ so that it will receive traffic when the virtual server is marked down. (Choose the two options that correctly complete the sentence.)

- A. a redirect URL string
- B. another NetScaler system
- C. the name of a backup virtual server
- D. the node ID of the secondary in the HA pair

Correct Answer: AC
