QUESTION 1

Scenario: An administrator built four new hosts in an existing XenServer pool that already has multiple hosts connected to a shared storage over Fibre Channel. The administrator discovered that the new hosts are NOT able to connect to the existing storage repositories.

Which two steps can the administrator take to resolve the issue? (Choose two.)

- A. Check the log files.
- B. Recreate the storage repositories.
- C. Verify that the LUNs are mapped and zoned correctly.
- D. Convert the storage repositories to shared storage repositories.

Correct Answer: AC

QUESTION 2

Scenario: An administrator needs to change the pool master to prepare for maintenance activities during the evening. High availability is currently enabled.

Using the XenCenter Console, what must the administrator do to change the pool master?

- A. Disable high availability.
- B. Configure workload balancing.
- C. Enable virtual machine protection policy.
- D. Enter maintenance mode on the pool master.

Correct Answer: D

QUESTION 3
