QUESTION 1

Scenario: An administrator created a single vDisk in the Provisioning Services Console that will be delivered to multiple target devices. The operating system must save user changes to applications.

Which two options did the administrator select while preparing the vDisk? (Choose two.)

- A. Private Image mode
- B. Cache in Device RAM
- C. Standard Image mode
- D. Cache on Hard Drive Persistent

Correct Answer: CD

QUESTION 2

Scenario: An administrator configured link aggregation on two switch ports that are connected to the XenServer network interface card (NIC) bond. NO network flow is possible on the NIC bond.

How can the administrator resolve this networking issue?

- A. Remove the NIC bond.
- B. Change the NIC bond to active/active.
- C. Configure link aggregation with failover.
- D. Remove link aggregation from the switch ports.
- E. Ensure that the IP address is correct on the NIC bond.

Correct Answer: D

QUESTION 3

Scenario: An administrator is deploying a XenDesktop environment and would like to make use of XenServer IntelliCache on an existing host to improve performance. The environment is configured with local, iSCSI, and NFS ISO storage repositories (SRs). NO virtual machines are on the host.

What must the administrator do before IntelliCache can be enabled?

- A. Create a new LUN on the iSCSI SR and enable thin provisioning.
- B. Convert the existing NFS ISO SR to NFS VHD with thin provisioning enabled.
- C. Destroy the existing LVM local SR and replace it with a thin provisioned EXT3 SR.
- D. Format the existing iSCSI SR with the EXT2 file system and enable thin provisioning.

Correct Answer: C

QUESTION 4

An administrator needs to add a new group of similar computers to an existing Provisioning services farm. Which type of resource could the administrator create in Provisioning services?

- A. Farm
- B. Store
- C. Target Device
- D. Device Collection

Correct Answer: D

QUESTION 5

Which item in the Provisioning Services Console will the administrator need to configure to add a machine account from the Active Directory domain?

- A. Farm
- B. vDisk
- C. Server
- D. Target Device

Correct Answer: D
