## QUESTION 1

Scenario: An administrator is able to connect on some ports of a XenServer and NOT connect on others. The XenServer responds by indicating that some of the ports are blocked. The interface in question is the first Ethernet NIC.

Which two commands should the administrator run from the XenServer console to find out if any ports are blocked? (Choose two.)

- A. ip addr -r
- B. ethtool -AI
- C. netreport -r
- D. iptables -nL
- E. tcpdump -i eth0

Correct Answer: DE

---

## QUESTION 2

Scenario: An administrator is making changes to a stand-alone XenServer host and has taken it offline. The virtual machines on that host will be restored to another host.

The administrator needs to the virtual machines to meet the requirements of the scenario. (Choose the correct option to complete the sentence.)

- A. copy
- B. export
- C. protect
- D. migrate

Correct Answer: B

---

## QUESTION 3

Scenario: A new email virus threat has been publicly announced, but virus definitions are NOT yet available for protection. An administrator manages the virtual machine hosting the mail server of the company. There are NO redundant mail servers available and mail flow CANNOT be interrupted.

What can the administrator do as a preventive tactic?

- A. Preserve the virtual machine by exporting it to an external drive.
- B. Enable high availability to ensure the virtual machine remains online.
- C. Make a copy of the virtual machine in case the original gets infected.

D. Perform an online backup by taking a snapshot of the virtual machine.

Correct Answer: D

---

#### QUESTION 4

An administrator needs to configure dynamic memory control (DMC) for Microsoft Windows XP SP2 virtual machines in the XenServer pool.

What must the administrator do before DMC can be configured on the virtual machines?

- A. Update the static memory range.
- B. Upgrade to a XenServer Platinum license.
- C. Upgrade the virtual machines to Microsoft Windows XP SP3.
- D. Run the param-name=memory-static - {min, max} command.

Correct Answer: C

---

#### QUESTION 5

Scenario: The SAN Administrator provided an NFS share for the XenServer Administrator to use. The share name is NfsLun01 and is located at 192.168.0.53.

Which format must the administrator use to connect to the share?

- A. 192.168.0.53:/NfsLun01
- B. \192.168.0.53\NfsLun01
- C. 192.168.0.53:3260\NfsLun01
- D. http://192.168.0.53/NfsLun01

Correct Answer: A
