QUESTION 1

You create a locally managed tablespace ORDERS_TBS with automatic segment management.

You then create the table DAILY_ORDS_LST in the ORDERS_TBS tablespace using the command.

```
CREATE TABLE daily_ords_1st(ordno NUMBER, ord_date DATE) PCTFREE 20;
```

How does the PCTFREE storage parameter influence data storage for this table?

- A. It allows only 80% of space to be occupied in all data blocks of this table.
- B. It minimizes row chaining during row insertion.
- C. It minimizes row migration during existing row data updation.
- D. It automatically coalesces free space of a data block when it reaches 20% of available space.

Correct Answer: A

QUESTION 2

Which two statements are true about Oracle network connections? (Choose two.)

- A. A listener may listen on behalf of only one database instance at a time.
- B. A server process checks a user's authentication credentials and creates a session if the credentials are valid.
- C. The listener continuously monitors a connection after the user process connects to a service handler.
- D. The listener always spawns a new server process to deal with each new connection.
- E. A connection request from a client is always first received by a listener running on the port that is used for the connection request for the database server.

Correct Answer: BE

QUESTION 3

Which statement is true about profiles?

- A. Resource limits specified in a profile assigned to a user are always enabled.
- B. A user can exist without any profile.
- C. A profile can be assigned only to one user.
- D. Password management using profiles is always enabled.

Correct Answer: D

QUESTION 4

Which three statements are true about Oracle Restart? (Choose three.)

- A. It can be configured to automatically attempt to restart various components after a hardware or software failure.
- B. While starting any components, it automatically attempts to start all dependencies first and in proper order.
- C. It can be configured to automatically restart a database in case of normal shutdown of the database instance.
- D. It can be used to only start Oracle components.
- E. It runs periodic check operations to monitor the health of Oracle components.

Correct Answer: BDE

QUESTION 5

Which three naming methods or connection types enable clients to connect to database instances successfully without client or server side configuration in sqlnet.ora or tnsnames.ora? (Choose three.)

- A. using the easy connect method from a remote terminal
- B. using CONNECT / AS SYSDBA from a local terminal
- C. using the easy connect method from a local terminal
- D. using the directory naming method from a remote terminal
- E. using the local naming method from a local terminal
- F. using CONNECT / AS SYSDBA from a remote terminal
- G. using the directory naming method from a local terminal

Correct Answer: CEF
