QUESTION 1

You must use a physical standby database file to recover a data file on a primary database in a Data Guard environment.

Which three of these steps must be performed on the primary database after the file has been backed up using RMAN on the physical standby database?

- A. Connect to the primary database as the AUXILIARY.
- B. Catalog the data file copy for RMAN to use on the primary database for restore.
- C. Back up the data file as copy on the standby host to a location on the standby host.
- D. Switch to the data file copy using the RMAN SWITCH command.
- E. Back up the data file as copy on the standby host to a location on the primary host
- F. Connect to the primary database as the TARGET.

Correct Answer: ABD

QUESTION 2

Which two statements are true for Data Guard environments with multi-tenant databases?

- A. Different pluggable databases within a logical standby database may have different guard statuses.
- B. The Data Guard broker automatically always opens the pluggable databases of a standby database after a role change operation.
- C. The Data Guard broker automatically opens all pluggable databases of a primary database a role change operation.
- D. The CDBDBA privilege must be used instead of the SYSDBA privilege for connections as SYS to the root container of a multi-tenant standby database.
- E. A multi-tenant standby database can have fewer pluggable databases than the primary container database

Correct Answer: CD

QUESTION 3

Which three are always benefits of using a logical standby database?

- A. it can be used for database rolling release upgrades
- B. it can be used to replicate a single pluggable database (PDB) in a multitenant container database.
- C. It can be used as an updatable database for Real Application testing and then converted back to a standby database without affecting the updates.

- D. It can be used for reporting workloads requiring additional indexes or materialized views or both.
- E. It provides a disaster-recovery solution with switchover and failover options that can recover any data updated on the primary database.
- F. It can be used for testing patches without affecting the primary database.

Correct Answer: CDF

QUESTION 4

You edit the DGConnectIdentifier database property using the edit database set property DGMGRL command Which two are effects of this change?

- A. The fal_client database initialization parameter on all standby databases is updated with the new value.
- B. The service attribute of the log_archive_dest_n initialization parameter for any database referring to the specified database is updated with the new value.
- C. The fal_client database initialization parameter for the specified database is updated with the new value
- D. The broker configuration must be disabled and then enabled to use the new connection property.
- E. The service attribute of the log_archive_dest_n initialization parameter referring to all standby databases is updated with the new value

Correct Answer: AB

QUESTION 5

Which three statements are true about standby redo logs in a Data Guard configuration with no Oracle Streams or Goldengate configured?

- A. They are required on a logical standby for real-time apply
- B. They are required only for synchronous redo transport.
- C. Only standby databases can write redo to them.
- D. It is recommended to have them on the primary database.
- E. They are required on a physical standby for real-time apply.
- F. The LGWR process writes to them on a standby database.

Correct Answer: ACE
