QUESTION 1

Which three statements are true about snapshot standby databases?

- A. Tablespaces can be dropped.
- B. Tables can be dropped
- C. The broker may be used to fail over to a snapshot standby database.
- D. A logical standby database can be converted into a snapshot standby database.
- E. Tablespaces can be created.

Correct Answer: ABE

QUESTION 2

There are currently 6 APPLIER and 6 PREPARER processes running and no idle APPLIER processes on your logical standby database. The MAX_SERVERS SQL apply parameter and number of archiver processes are both set to 12. Identify two changes, each of which would allow you to increase the number of APPLIER processes.

- A. Increase the PROCESSES initialization parameter
- B. Increase the value for the MAX_SERVERS SQL apply parameter.
- C. Decrease the number of archiver processes on the standby database. D. increase the PARALLEL_MAX_SERVER initialization parameter
- D. Decrease the number of PREPARER processes
- E. Increase the RECOVERY_PARALLEUSM initialization parameter

Correct Answer: BE

QUESTION 3

A customer asks you to propose the most appropriate solution for this set of requirements:

1.

We need a disaster recovery solution that enables us to fail over from our production database with zero data loss.

2.

We want to generate reports from the proposed standby database at the same time that it is used for other purposes.

3.

Developers may need to test occasionally on a copy of the live database.

You have to already confirmed that there are no unsupported data types on the primary database Which two solutions would you recommend?

- A. a remote physical standby database with RedoRoutes via a far sync instance
- B. a snapshot standby database with synchronous redo transport
- C. a physical standby database with real-time query enabled
- D. a logical standby database
- E. a read mostly implementation of a physical standby database

Correct Answer: BC

QUESTION 4

You have a Data Guard Broker configuration called Somewhere\ as shown: Which two are true about the output of this DGMGRL command?

```
DGMGRL> show configuration;
```

```
Configuration –Somewhere
```

```
Protection Mode: MaxPerformance
```

```
Databases:
```

```
Nearby-Primary database
```

```
FS-Far Sync
```

```
Farout-Physical standby database
```

```
Fast-Start Failover: DISABLED
```

```
Configuration Status: SUCCESS
```

You then run this command:

```
DGMGRL> SHOW DATABASE 'Nearby' 'InconsistentProperties';
```

- A. A far sync instance cannot have inconsistent properties because it has no database.
- B. It shows all properties whose broker configuration values for database Nearby are inconsistent with the broker configuration values for database Farout.
- C. It shows all properties whose broker configuration values for database Nearby are inconsistent with the values in the corresponding server parameter file or the runtime values for database instance Nearby.
- D. Any inconsistency reported is on an instance-specific basis.

Correct Answer: CD

QUESTION 5

Which two are prerequisites for creating a standby database using Enterprise Manager cloud control?

- A. The primary database must have FORCE LOGGING enabled.
- B. The primary database must be in archive log mode
- C. A backup of the primary database must exist.
- D. The primary host and the proposed standby database host must run the same operating system.
- E. The primary database instance must be started using an SPFILE.
- F. The primary database must have flashback enabled

Correct Answer: AB
