QUESTION 1

Which three file-based data imports are available for use in Oracle Project Portfolio Management Cloud?

- A. Project Budgets
- B. Project Tasks
- C. Project Billing Events
- D. Project Templates

Correct Answer: ABC

Ref: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/19a/oefpp/toc.htm>

QUESTION 2

Which application would you use to map application roles to external roles? (Choose the best answer.)

- A. Oracle Identify Manager
- B. Authorization Policy Manager
- C. BPM Work List
- D. Security Console

Correct Answer: B

Ref: https://docs.oracle.com/cd/E17904_01/doc.1111/e14431/managing.htm#APMAG3333 Fusion Middleware Administrator's Guide for Authorization Policy Manager Managing Security Artifacts This chapter describes the procedures an administrator follows to manage application-specific security artifacts, view the external role hierarchy, manage the application role hierarchy, and manage the many-to-many mapping of application roles to external roles from both the application and the external role point of view. This chapter is divided into the following sections: Managing Application Security Artifacts Viewing the External Role Hierarchy Managing the Application Role Hierarchy Mapping Application Roles to an External Role Mapping External Roles to an Application Role Role Mapping Policy A Role Mapping Policy is used to determine what external subjects (users, groups or External Roles) are assigned to the applicable Application Role. The Application Role, when referenced in an Authorization Policy, defines the principals affected by the Authorization Policy. Role Mapping Policies may also include conditions Oracle Identity Manager ?Not used for mapping application roles to external roles How do Users Interact with Oracle Identity Manager? Oracle Identity Manager provides an end-user interface, called the Identity Self Service console, and a system administrator interface, called the Identity System Administration console. Both end-users and system administrators use the web browser to log on to Oracle Identity Manager. Oracle Identity Manager (OIM) OIM provision users, roles, and defines what a user can do in Oracle Cloud Duty Roles are mapped to jobs and assigned access privileges (Data Security)

QUESTION 3

While creating a new project template, you notice that a default Asset Cost Allocation method is being automatically associated. Identify the source setup from which the default value is being inherited. (Choose the best answer.)

- A. project classification
- B. project type
- C. project unit
- D. project organization

Correct Answer: B

Ref: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/19b/oapjf/define-project.html#OAPJF220111>
Asset Cost Allocation Methods The asset cost allocation method determines how indirect or common costs incurred on a project are allocated to multiple assets. You can specify an asset cost allocation method to enable Oracle Fusion Project Costing to automatically allocate unassigned asset lines and common costs across multiple assets. Unassigned asset lines typically occur when more than one asset is assigned to an asset grouping level. Projects and project templates inherit a default asset cost allocation method from the associated project type. You can override the default at the project level. If you use capital events to allocate costs, then you can also override the asset cost allocation method at the event level Asset Cost Allocation Methods The following table describes the available asset cost allocation methods.

Method	Basis of Cost Allocation	Actual Units	Number of units defined for each asset	Current Cost	Construction-in-process (CIP) cost of each asset	Estimated	Estimated cost of each asset	Cost Standard	Unit Combination of the standard unit cost and the number of units	Cost defined for each asset	Spread Evenly	Equal allocation of cost to each asset
--------	--------------------------	--------------	----------------------------------------	--------------	--------------------------------------------------	-----------	------------------------------	---------------	--------------------------------------------------------------------	-----------------------------	---------------	----------------------------------------

QUESTION 4

Your organization has created an Enterprise Project Structure (EPS) and your executives review the overall project labor demand by using the EPS. Identify two correct statements about the periodic project labor demand. (Choose two.)

- A. Labor Demand FTE is calculated as Quarterly Allocation hours divided by Quarterly FTE hours, if a quarter is used as the basis for viewing labor demand.
- B. Labor Demand FTE is calculated as Yearly Allocation hours divided by Yearly FTE hours, if a year is used as the basis for viewing labor demand.
- C. Labor Demand FTE is calculated as Project Allocation hours divided by Project FTE hours, if project duration is used as the basis for viewing labor demand.
- D. Labor Demand FTE is calculated as Monthly Allocation hours divided by Monthly FTE hours, if a period is used as the basis for viewing labor demand.

Correct Answer: AB

Reference

https://docs.oracle.com/cloud/farel10/projectcs_gs/OAPEM/OAPEM1461017.htm#OAPEM1313472 Project Labor Demand: How It's Calculated

Project executives want to track the labor demand in projects in their organization. The Project Hierarchy Viewer provides project executives a hierarchical view of the enterprise project structure (EPS) along with the labor demand in terms of

full-time equivalent (FTE).

Settings That Affect Project Labor Demand

Project application administrators must do the following to set up how project labor demand is calculated:

Organize projects into hierarchical groups on the Manage Enterprise Project Structure page. Change the quarterly FTE hours for the organization on the Define Project Management Implementation Options page, if different from 520 hours.

Note: You can choose to view labor demand annually instead of quarterly. The Project Hierarchy Viewer uses the current date to determine which year or quarter to display.

How Project Labor Demand Is Calculated

The Project Hierarchy Viewer calculates project labor demand in the following manner:

Spreads the allocation hours from the Manage Project Resources page evenly over the days that the resources are allocated to the project.

Divides the quarterly project allocation hours by the quarterly FTE hours to get the labor demand. Rolls up the quarterly and annual labor demand up the hierarchy.

QUESTION 5

Which three setups can be configured by using Rapid Implementation for Project Financial Management Applications?

- A. Departments
- B. Expenditure Types
- C. Project Templates
- D. Project Types

Correct Answer: ABD
