QUESTION 1

You have created the following JSON file to specify a lifecycle policy for one of your object storage buckets:

```
[
  {
    "name": "Archive LOGS",
    "action": "ARCHIVE",
    "objectNameFilter": {
      "inclusionPrefixes": [
        "LOGS"
      ]
    },
    "timeAmount": 30,
    "timeUnit": "DAYS",
    "isEnabled": true
  },
  {
    "name": "DELETE_LOGS",
    "action": "DELETE",
    "objectNameFilter": {
      "inclusionPrefixes": [
        "LOGS"
      ]
    },
    "timeAmount": 120,
    "timeUnit": "DAYS",
    "isEnabled": true
  }
]
```

How will this policy affect the objects that are stored in the bucket? (Choose the best answer.)

- A. Objects with the prefix "LOGS" will be retained for 120 days and then deleted permanently.
- B. Objects containing the name prefix LOGS will be automatically migrated from standard Storage to Archive storage 30 days after the creation date. The object will be deleted 120 days after creation.
- C. The objects with prefix "LOGS" will be deleted 30 days after creation date.
- D. Objects containing the name prefix LOGS will be automatically migrated from standard Storage to Archive storage 30 days after the creation date. The object will be migrated back to standard Storage 120 days after creation.

Correct Answer: B

QUESTION 2

You are working as a Cloud Operations Administrator for your company. They have different Oracle Cloud Infrastructure (OCI) tenancies for development and production workloads. Each tenancy has resources in two regions – uk-london-1 and eu-frankfurt-1. You are asked to manage all resources and to automate all the tasks using OCI Command Line Interface (CLI).

Which is the most efficient method to manage multiple environments using OCI CLI? (Choose the best answer.)

- A. Use OCI CLI profiles to create multiple sets of credentials in your config file, and reference the appropriate profile at runtime.
- B. Create environment variables for the sets of credentials that align to each combination of tenancy, region, and environment.
- C. Run `oci setup config` to create new credentials for each environment every time you want to access the environment.
- D. Use different bash terminals for each environment.

Correct Answer: B

QUESTION 3

You created an Oracle Linux compute instance through the Oracle Cloud Infrastructure (OCI) management console then immediately realize you forgot to add an SSH key file. You notice that OCI compute service provides instance console connections that supports adding SSH keys for a running instance. Hence, you created the console connection for your Linux server and activated it using the connection string provided. However, now you get prompted for a username and password to login.

What option should you recommend to add the SSH key to your running instance, while minimizing the administrative overhead? (Choose the best answer.)

- A. You need to configure the boot loader to use `ttyS0` as a console terminal on the VM.
- B. You need to terminate the running instance and recreate it by providing the SSH key file.
- C. You need to reboot the instance from the console, boot into the bash shell in maintenance mode, and add SSH keys for the `opc` user.
- D. You need to modify the serial console connection string to include the identity file flag, `-i` to specify the SSH key to use.

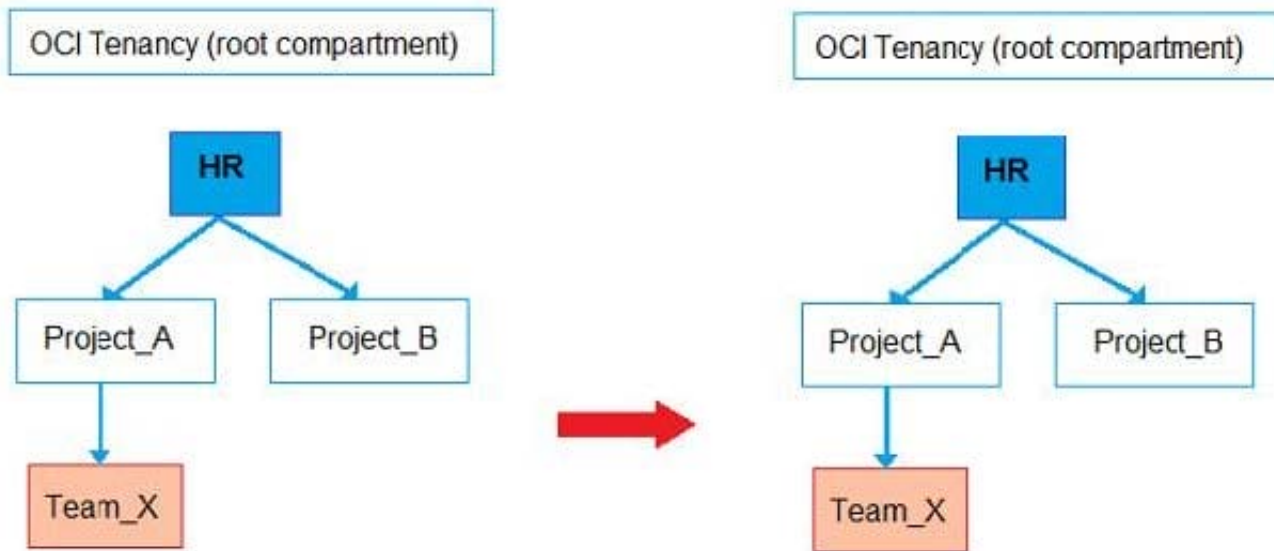

Correct Answer: D

Reference: <https://docs.oracle.com/en-us/iaas/Content/Compute/References/serialconsole.htm>

QUESTION 4

Your company has restructured its HR departments. As part of this change, you also need to re-organize compartments within Oracle Cloud Infrastructure (OCI) to align them to the company's new organizational structure. The following change is required:

Compartment Team_x needs to be moved under a new parent compartment, Project_B

The tenancy has the following policies defined for compartments Project_A and Project_B: Policy1: Allow group G1 to manage instance-family in compartment HR:Project_A Policy2: Allow group G2 to manage instance-family in compartment HR:Project_B

Which two statements describe the impacts after the compartment Team_x is moved? (Choose two.)

- A. Group G2 can now manage instance-families in compartment Project_B and compartment Team_X
- B. Group G1 can now manage instance-families in compartment Project_A, compartment Project_B and compartment Team_X
- C. Group G1 can now manage instance-families in compartment Project_A but not in compartment Team_x
- D. Group G2 can now manage instance-families in compartment Project_A but not in compartment Team_x
- E. Group G2 can now manage instance-families in compartment Project_B, compartment Project_A and compartment Team_X

Correct Answer: AC

QUESTION 5

You have recently joined a startup company and quickly find that nobody is tracking the amount of money spent on Oracle Cloud Infrastructure (OCI). Seeing an opportunity to help save money you begin creating a solution to better track the cost of resources provisioned by each individual on the team.

Which option allows you to identify excessive spend across all resources in your tenancy? (Choose the best answer.)

- A. Use the Python SDK to write a custom application that will monitor the Audit log. Look for CREATE events and configure the application to send you an email each time a new resource is created.
- B. Create a tag namespace named BILLING with a Tag Key named CostCenter. Tag each of your resources with this Tag Key and the correct value.
- C. Use the Events Service and create rules that will act when a new Object Storage bucket or Compute Instance has been created. Have the rule email you each time one of these events occurs.
- D. Create a budget for each compartment that will send a notification when monthly spend reaches a predefined amount.

Correct Answer: D
