QUESTION 1

Which two tools would you use to manage Database Cloud Service (DBCS)? (Choose two.)

- A. psql
- B. Oracle Swingbench
- C. SQL Developer
- D. Oracle Enterprise Manager

Correct Answer: CD

QUESTION 2

There are multiple options of migrating Oracle Databases from on-premises to Oracle Cloud Infrastructure. Which two characteristics do you need to consider when choosing a migration method? (Choose two.)

- A. On-premises database character set and application version
- B. On-premises database version and quantity of data, including indexes
- C. On-premises host operating system platform and network bandwidth
- D. On-premises connectivity using remote and local VCN peering

Correct Answer: BC

References: <https://docs.cloud.oracle.com/iaas/Content/Database/Tasks/migrating.htm> Some of the characteristics and factors to consider when choosing a migration method are: On-premises database version Database service database version On-premises host operating system and version On-premises database character set Quantity of data, including indexes Data types used in the on-premises database Storage for data staging Acceptable length of system outage Network bandwidth

QUESTION 3

You have the following compartment structure in your tenancy. Root compartment->Training- >Training-sub1 ->Training-sub2 You create a policy in the root compartment to allow the default admin for the account (Administrators) to manage

block volumes in compartment Training-sub2.

What policy would you write to meet this requirement?

- A. Allow group Administrators to manage volume-family in root compartment
- B. Allow group Administrators to manage volume-family in compartment Training-sub1 :Training- sub2
- C. Allow group Administrators to manage volume-family in compartment Training: Training-sub 1 :Training-sub2
- D. Allow group Administrators to manage volume-family in compartment Training-sub2

Correct Answer: C

a policy statement must specify the compartment for which access is being granted (or the tenancy). Where you create the policy determines who can update the policy. If you attach the policy to the compartment or its parent, you can simply specify the compartment name. If you attach the policy further up the hierarchy, you must specify the path. The format of the path is each compartment name (or OCID) in the path, separated by a colon: :: . . . For example, assume you have a three-level compartment hierarchy, shown here:

You want to create a policy to allow NetworkAdmins to manage VCNs in CompartmentC. If you want to attach this policy to CompartmentC or to its parent, CompartmentB, write this policy statement:

Allow group NewtworkAdmins to manage virtual-network-family in compartment CompartmentC However, if you want to attach this policy to CompartmentA (so that only administrators of CompartmentA can modify it), write this policy

statement that specifies the path:

Allow group NewtworkAdmins to manage virtual-network-family in compartment CompartmentB:CompartmentC

To attach this policy to the tenancy, write this policy statement that specifies the path from CompartmentA to CompartmentC:

Allow group NewtworkAdmins to manage virtual-network-family in compartment CompartmentA:CompartmentB:CompartmentC

QUESTION 4

You have been tasked with creating one virtual cloud network (VCN) each for two line of business (LOB) applications. LOB A and LOB B will need to communicate with each other. To ensure that you can utilize VCN peering, which network CIDR ranges should be used?

- A. VCN A (10.0.0.0/16) and VCN B (10.1.0.0/16)
- B. VCN A (10.0.2.0/16) and VCN B (10.0.2.0/25)
- C. VCN A (10.0.0.0/16) and VCN B (10.0.16.0/24)
- D. VCN A (172.16.0.0/24) and VCN B (172.16.0.0/28)

Correct Answer: A

VCN A (10.0.0.0/16) will use a range of IPS from 10.0.0.0 to 10.0.255.255 and VCN B (10.1.0.0/16) will use a range of IPS from 10.1.0.0 to 10.1.255.255 so will not be any Overlap between 2 VCNs

QUESTION 5

An Oracle Cloud Infrastructure tenancy administrator is not able to delete a user in the tenancy. What can cause this issue?

- A. User has multi-factor authentication (MFA) enabled.
- B. User is member of an Identity and Access Management (IAM) group.
- C. Users can be blocked but not deleted.
- D. User needs to be deleted from federation Identity Provider (IdP) before deleting from IAM.

Correct Answer: A
