QUESTION 1

With regard to Oracle Cloud Infrastructure Load Balancing service, which two actions will occur when a backend server that is registered with a backend set is marked to drain connections?

- A. All existing connections to this backend sever will be immediately closed.
- B. Requests to this backend server are redirected to a user-defined error page.
- C. All new connections to this backend server are disallowed.
- D. Connections to this backend server will remain open until all in-flight requests are completed.
- E. All connections to this backend server are forcibly closed after a timeout period.

Correct Answer: CD

Reference: <https://docs.cloud.oracle.com/en-us/iaas/Content/Balance/Reference/sessionpersistence.htm>

QUESTION 2

Which two features are offered natively on Oracle Cloud Infrastructure Database Cloud Service (DBCS)? (Choose two.)

- A. Data Guard in Async mode within a region
- B. GoldenGate replication between two regions
- C. Data Guard in Maximum Protection mode
- D. backup to Object Storage

Correct Answer: AD

Data Guard in Maximum Performance protection mode is supported not simply Maximum Protection mode, however, you can configure additional protection modes and transport types by logging on to the DB system and accessing Data Guard command-line interface(DGMGRL).

QUESTION 3

You deployed a database on a Standard Compute instance in Oracle Cloud Infrastructure (OCI) due to cost concerns. The database requires additional storage with high I/O and you decided to use OCI Block Volume service for it. With this requirement in mind, which elastic performance option should you choose for the Block Volume?

- A. Balanced Performance
- B. Higher performance
- C. Extreme performance
- D. Lower cost

Correct Answer: B

Reference: <https://docs.cloud.oracle.com/en-us/iaas/Content/Block/Concepts/blockvolumeperformance.htm>

QUESTION 4

You are a network architect of an application running on Oracle Cloud Infrastructure (OCI). Your security team has informed you about a security patch that needs to be applied immediately to one of the backend web servers. What should you do to ensure that the OCI load balancer does not forward traffic to this backend server during maintenance?

- A. Drain all existing connections to this backend server and mark the backend web server offline
- B. Create another OCI load balancer for the backend web servers, which are active and handling traffic
- C. Edit the security list associated with the subnet to avoid traffic connectivity to this backend server
- D. Stop the load balancer for maintenance and restart the load balancer after the maintenance is finished

Correct Answer: A

A load balancer improves resource utilization, facilitates scaling, and helps ensure high availability. You can configure multiple load balancing policies and application-specific health checks to ensure that the load balancer directs traffic only to healthy instances. The load balancer can reduce your maintenance window by draining traffic from an unhealthy application server before you remove it from service for maintenance. The Load Balancing service considers a server marked drain available for existing persisted sessions. New requests that are not part of an existing persisted session are not sent to that server. Edit Drain State: Opens a dialog box in which you can change the drain state. If you set the server's drain status to true, the load balancer stops forwarding new TCP connections and new non-sticky HTTP requests to this backend server. This setting allows an administrator to take the server out of rotation for maintenance purposes.

e. Edit Offline State: Opens a dialog box in which you can change the offline status.

If you set the server's offline status to true, the load balancer forwards no ingress traffic to this backend server.

QUESTION 5

Which two statements about Oracle Cloud Infrastructure File Storage Service are accurate? (Choose two.)

- A. Customer can encrypt the communication to a mount target via export options.
- B. Mount targets use Oracle-managed keys by default.
- C. File systems use Oracle-managed keys by default.
- D. Customer can encrypt data in their file system using their own Vault encryption key.
- E. Communication with file systems in a mount target is encrypted via HTTPS.

Correct Answer: BD
