QUESTION 1

Which storage would you use if your big data workload requires shared access and an NFS based interface?

A. File Storage

B. Storage Software Cloud Appliance

C. Object Storage

D. Archive Storage

E. Block Volume

Correct Answer: A

References:

https://docs.cloud.oracle.com/iaas/Content/File/Concepts/filestorageoverview.htm The File Storage service is designed to meet the needs of applications and users that need an enterprise file system across a wide range of use cases,

including the following:

General Purpose File Storage: Access to an unlimited pool of file systems to manage growth of structured and unstructured data.

Big Data and Analytics: Run analytic workloads and use shared file systems to store persistent data. Lift and Shift of Enterprise Applications: Migrate existing Oracle applications that need NFS storage, such as Oracle E-Business Suite and

PeopleSoft.

Databases and Transactional Applications: Run test and development workloads with Oracle, MySQL, or other databases.

Backups, Business Continuity, and Disaster Recovery: Host a secondary copy of relevant file systems from on premises to the cloud for backup and disaster recovery purposes. MicroServices and Docker: Deliver stateful persistence for

containers. Easily scale as your container- based environments grow.

QUESTION 2

Which two statements are true about data guard service on DB Systems in Oracle Cloud Infrastructure (OCI)?

A. Data guard implementation requires two DB Systems, one running the primary database on a virtual machine and the standby database running on bare metal.

B. Data guard implementation requires two DB Systems, one containing the primary database and one containing the standby database.

C. Data guard configuration on the OCI is limited to a virtual machine only.

D. Both DB Systems must use the same VCN, and port 1521 must be open.

Correct Answer: BD

QUESTION 3

Which two resources reside exclusively in a single Oracle Cloud Infrastructure Availability Domain? (Choose two.)

A. Identity and Access Management Groups

B. Object Storage

C. Web Application Firewall policy

D. Block volume

E. Compute instance

Correct Answer: DE

Availability Domain-Specific Resources DB Systems ephemeral public IPs instances: They can be attached only to volumes in the same availability domain. subnets: When you create a subnet, you choose whether it is regional or specific to an availability domain. Oracle recommends using regional subnets. volumes: They can be attached only to an instance in the same availability domain.

QUESTION 4

Which two options are true for Autonomous Transaction Processing (ATP) database? (Choose two.)

A. You can add/remove Diskgroup in ATP

B. You can scale storage up or down in ATP

C. You can scale CPU up or down in ATP

D. You can add more Pluggable Database for consolidating multiple databases in ATP

E. You can add new ORACLE_HOME for bringing older versions of on-premises databases to ATP

Correct Answer: BC

You can scale up/down your Autonomous Database to scale both in terms of compute and storage only when needed, allows people to pay per use.

Oracle allows you to scale compute and storage independently, no need to do it together. these scaling activities fully online (no downtime required) in Details page Autonomous Database click Scale Up/Down. Click on arrow to select a value

for CPU Core Count or Storage (TB).

Or Select auto scaling to allow the system to automatically use up to three times more CPU and IO resources to meet workload demand, compared to the database operating with auto scaling disabled.

QUESTION 5

Which statement is true about Oracle Cloud Infrastructure FastConnect?

A. For private peering, FastConnect extends your existing infrastructure to allow you to consume object storage from your on-premises data center

B. For private peering, FastConnect extends your existing infrastructure to a virtual cloud network

C. The FastConnect provider network offers only 1 Gbps port connection speed increments

D. For public peering, a dynamic routing gateway must be configured and attached to the virtual cloud network (VCN)

Correct Answer: B

With FastConnect, you can choose to use private peering, public peering, or both. Private peering: To extend your existing infrastructure into a virtual cloud network (VCN) in Oracle Cloud Infrastructure (for example, to implement a hybrid cloud, or a lift and shift scenario). Communication across the connection is with IPv4 private addresses (typically RFC 1918). Public peering: To access public services in Oracle Cloud Infrastructure without using the internet. For example, Object Storage, the Oracle Cloud Infrastructure Console and APIs, or public load balancers in your VCN. Communication across the connection is with IPv4 public IP addresses. Without FastConnect, the traffic destined for public IP addresses would be routed over the internet.
