-  **800,000+** Satisfied Customers

### QUESTION 1

Which resource is required when connecting to your on-premise network from your Virtual Cloud Network (VCN) via IPSec VPN or FastConnect?

- A. Internet Gateway (IGW)
- B. Dynamic Routing Gateway (DRG)
- C. local peering gateway
- D. NAT

Correct Answer: B

References: <https://cloud.oracle.com/networking/vcn/faq>

---

### QUESTION 2

You are responsible for setting up access for all the cloud users of a large enterprise. You log in to the Phoenix region and start creating users and policies. You then realize that some users might be creating resources in the Ashburn region. Which step should you perform to enable those users?

- A. You can assign a region to each of the users at the time of creation.
- B. IAM users are global and non-admin users can add resources to any region by default.
- C. You need to log in to each region separately to create users for that particular region.
- D. IAM users are global. As an administrator, make sure that you subscribe to the Ashburn region.

Correct Answer: D

---

### QUESTION 3

You must implement a backup solution for your Autonomous Data Warehouse (ADW) that will enable you to restore data as old as one year with a recovery point objective (RPO) of 10 days. Which database backup strategy would you select?

- A. Take weekly manual backups to supplement the automated backups and preserve them for 12 months.
- B. Use the automated backups.
- C. Take monthly manual backups to supplement the automated backups and preserve them for 12 months.
- D. Take quarterly manual backups to supplement the automated backups and preserve them for 12 months.

Correct Answer: B

Oracle Cloud Infrastructure automatically backs up your Autonomous Databases and retains these backups for 60 days. Automatic backups are weekly full backups and daily incremental backups. You can also create manual backups to

supplement your automatic backups. Manual backups are stored in an Object Storage bucket that you create, and are retained for 60 days. The retention period for manual backups is the same as automatic backups which is 60 days. So we cannot preserve the backup for 12 months <https://docs.oracle.com/en/cloud/paas/autonomous-data-warehouse-cloud/user/backup-manual.html#GUID-D95E5D6A-C470-4A68-9545-CC99D937E7D1>

#### QUESTION 4

You are about to deploy an e-business application on Oracle Cloud Infrastructure and one of the requirements is to use a shared file system that supports the NFS protocol. Which storage service would meet this requirement?

- A. object storage
- B. block volume
- C. data transfer appliance
- D. file storage

Correct Answer: D

Use the File Storage service when your application or workload includes big data and analytics, media processing, or content management, and you require Portable Operating System Interface (POSIX)-compliant file system access

semantics and concurrently accessible storage. The File Storage service is designed to meet the needs of applications and users that need an enterprise file system across a wide range of use cases, including the following:

**General Purpose File Storage:** Access to an unlimited pool of file systems to manage growth of structured and unstructured data.

**Big Data and Analytics:** Run analytic workloads and use shared file systems to store persistent data.

**Lift and Shift of Enterprise Applications:** Migrate existing Oracle applications that need NFS storage, such as Oracle E-Business Suite and PeopleSoft.

**Databases and Transactional Applications:** Run test and development workloads with Oracle, MySQL, or other databases.

**Backups, Business Continuity, and Disaster Recovery:** Host a secondary copy of relevant file systems from on premises to the cloud for backup and disaster recovery purposes.

**MicroServices and Docker:** Deliver stateful persistence for containers. Easily scale as your container-based environments grow.

---

#### QUESTION 5

You currently manage an e-commerce application that utilizes 25 identical compute resources to handle customer traffic. The stakeholders have asked you to create another 25 identical compute resources in order to deploy and test a new version of the software?

What is the most efficient process to create 25 additional compute resources that are identical to the first 25?

- A. Create a custom image from 1 of the 25 servers. Use this custom image to provision 25 more servers

B. Create a manual backup of each boot volume belonging to the 25 servers. Restore each backup to create 25 new boot volumes, from which you will provision 25 more servers

C. Provision a new server and configure it to be identical to the first 25. Create a custom image from the new server, then use the custom image to provision 24 more servers

D. Clone the boot volume of 1 of the 25 servers. Use the boot volume clone to provision 25 more servers

Correct Answer: A
