QUESTION 1

Which machines can be configured by using the configuration Wizard?

- A. machine and Windows machine
- B. administration machine and managed machine
- C. machine and UNIX machine
- D. stand -alone machine and cluster machine E. RDBMS machine and LDAP machine

Correct Answer: C

QUESTION 2

In your WebLogic Server environment, applications will not access a single database server. Instead they will access a cluster of redundant database servers. This database product was purchased from a vendor other than Oracle. You want to provide transparent failover to the applications as they communicate with the database cluster. Which type of WebLogic data source should you create?

- A. generic data source
- B. multi data source
- C. GridLink data source
- D. parallel data source

Correct Answer: B

QUESTION 3

You want to start the managed server called managed1 in "Standby" mode, to keep it as a "hot backup". Which statement about your domain configuration must be true?

- A. The server managed1 must be of a cluster.
- B. Your domain has an administration port.
- C. Only the admin server can start in "standby" mode.
- D. There is no such thing as "standby" mode.

Correct Answer: B

QUESTION 4

You are deploying a web application called inventory, war. It has been installed and has the state of "prepared". It is targeted to the Managed server named managed1. The web application's context root is /inventory and the starting page is index.jsp.

However, you want to test the application before allowing end users access to it. In the administration console, you select inventory.war, and then select Start and "servicing only administration request."

In your web browser, you need to enter a host and port followed by /inventory/index.jsp.

Which host and port would you use?

- A. managed1 host and port
- B. Administration Server host and port
- C. managed1 host and Administration port
- D. Administration server host and Administration port

Correct Answer: C

QUESTION 5

Consider an IT infrastructure comprising several web and EJB applications. Each application is expected to handle significantly different workloads and, therefore, has different resource and scalability requirements.

Which is the best solution?

- A. Configure a separate proxy for each application
- B. Configure a dedicated WebLogic Server for each application
- C. Configure a separate node manager for each application
- D. Configure a separate cluster for each application

Correct Answer: A
