- A. Undo
- B. Pause/Resume
- C. sharing of tasks
- D. transferring of tasks
- E. branching within a task

Correct Answer: BDE

QUESTION 2

In Server Administration, you want to use the same set of parameters for several different components. How would you best accomplish this without manually setting the parameters for each and every component?

- A. Create a named subsystem (or profile).
- B. Copy the component to inherit the original parameter values.
- C. Right-click the Parameter Details list and select Propagate Parameters from the menu.
- D. Select all of the parameters from one component, then copy and paste them into the other components.

Correct Answer: A

QUESTION 3

You are creating a new view which contains a list applet at the top and a form applet at the bottom. Both applets are based on the same business component.

For one set of users, all the data shown in both applets should be editable. For another set of users the form applet should not allow deletes or updates.

What should you do?

- A. Create two views and set the No Update property to TRUE for one of them.
- B. Create two views and set Read Only View to TRUE when you add one to the responsibilities.
- C. Create two list applets and set the No Delete and No Update properties to TRUE for one of them.
- D. Create two form applets and set the No Delete and No Update properties to TRUE for one of them.
- E. Create two business components set the No Delete and No Update properties to TRUE for one of them.

Correct Answer: D

QUESTION 4

You decided to use the S_CONTACT_XM table to store additional contact data. Which five new object definitions will you need to create to display this data as child data in a Detail View format? (Choose five.)
