QUESTION 1

How does the REST data control wizard map REST web service resource URIs to HTTP method calls in MAF?

- A. Upon configuring REST service access, the application developer manually configures the REST URIs and maps them to HTTP methods.
- B. Stepping through the REST service data control wizard, the application developer references a remote Web Application Description Language (WADL) file that provides the service URIs and associated HTTP methods from which the developer can choose.
- C. The REST service data control creates only the REST connection and then generates the datacontrol definition. To configure the REST service URIs and map them to HTTP methods, the application developer needs to edit the Data Control definition file.
- D. The REST service data control maps the REST URI according to the annotations in the REST service. No user action is required.
