QUESTION 1

Which capability is added by Oracle Entitlement Server (OES) into Oracle Identity Manager (OIM)? (Choose the best answer.)

- A. The ability to provision fine-grained entitlements to managed platforms
- B. The ability to establish fine-grained authorizations for users working with OIM
- C. The ability to reconcile fine-grained entitlements from managed platforms.
- D. The ability to establish strong password policies for users working with the Oracle Identity Governance Suite
- E. The ability to manage real-time authorization based on contextual authentication techniques to reduce fraud for users working with the Oracle Identity Governance Suite.

Correct Answer: B

QUESTION 2

You are doing an initial load of all the directory groups into the catalog in Oracle Identity Manager.

What must be configured in the Catalog Synchronization job for this purpose? (Choose the best answer.)

- A. Process Entitlements parameter is checked.
- B. Process Roles parameter is checked.
- C. Both Process Application Instances parameter and Process Entitlements parameter are checked.
- D. Both Process Application Instances parameter and Process Roles parameter are checked.
- E. File Path parameter is used.

Correct Answer: D

QUESTION 3

Which statement is true about the "closed-loop remediation" aspect of access certification when using Oracle Identity Analytics (OIA)? (Choose the best answer.)

- A. After a certification cycle completes, the audit information can be viewed, so the remediation loop is closed.
- B. After a reviewer rejects access during a certification cycle, an automated request can be sent to the provisioning service to remediate access, so the remediation loop is closed.
- C. After a reviewer rejects access during a certification cycle, the user in violation can remediate access, so the remediation loop is closed.

- D. After a certification cycle completes, the user can request additional access, so the remediation loop is closed.
- E. Self-remediation is allowed by default for Oracle Identity Governance when integrating Oracle Identity Analytics and Oracle Identity Manager.

Correct Answer: D

QUESTION 4

You are asked to set up a connector that will link to a target system to create, delete, update, enable, and disable user accounts.

Identify the interface that is required to enable entities through this custom connector.(Choose the best answer.)

- A. org.identityconnectors.framework.spi.operations.CreateOp
- B. org.identityconnectors.framework.spi.operations.EnableOp
- C. org.identityconnectors.framework.spi.operations.UpdateOp The connector API should pass all the attributes of the existing entity along with a new_ENABLE_attribute with a value of true.
- D. org.identityconnectors.framework.spi.operations.EnableOp The connector API should pass all the attributes of the existing entity along with a new_ENABLE_attribute with a value of true.
- E. org.identityconnectors.framework.spi.operations.EnableOp The connector API should pass all the attributes of the existing entity along with a new_DISABLE_attribute with a value of false.

Correct Answer: C

QUESTION 5

Which statement is true about the check-in and check-out capabilities in Oracle Privileged Account Manager (OPAM)? (Choose the best answer.)

- A. Authorized users can check out an account, which provisions it; they can then check in the account, which de-provisions it.
- B. Authorized and non-authorized users can check in an account, which provisions it; they can then check out the account, which de-provisions it.
- C. Authorized users can check out an account before using it; they can then check in the account when they are finished with it.
- D. Authorized and non-authorized users can check out an account before using it; they can then check in the account when they are finished with it.
- E. Authorized users can check out an account before using it, but administrators must check in the account.

Correct Answer: C

Oracle Privileged Account Manager requires all authorized users to check out an account before using it, and then to

check that account back in when they are finished with it. Oracle Privileged Account Manager audits account check outs and check ins by tracking the real identity (the person's name) of every shared administrator user at any given moment in time. By using this information, Oracle Privileged Account Manager can provide a complete audit trail that shows who accessed what, when, and where.
