**QUESTION 1**

Given: `http://host:port/servlet_context_path/ContentServer?pagename=name_of_page`

In the preceding URL, which two legal values does `name_of_page` represent?

- A. externally callable name of a template
- B. SiteEntry
- C. CSElement name
- D. fully qualified page asset name with URL encoding

Correct Answer: BD

---

**QUESTION 2**

A content editor creates a new page asset called P. Page P contains an attribute of type asset with an existing, already published asset Article A (Mirror DependencyType Exists). The asset Article A, in turn, has an attribute of type asset with an existing, already published asset Image B (Mirror DependencyType Exists).

Which two statements are true?

- A. When approving Page P for publish the first time, Article A and Image B must be approved for publish.
- B. When approving Page P for publish the first time, Article A and Image B need not be approved for publish.
- C. If Article A has been updated since the last time it was published, it must be approved again when approving Page P for publish. But Image B need not be approved again.
- D. If Article A has been updated since the last time it was published, it need not be approved again when approving Page P for publish the first time. If, however, the updated version of Article A is required on the website, Article A would need to be separately approved for publish.
- E. If Page P is updated and approved for publish a second time, Article A and Image B need not be approved for publish again.
- F. If Page P is updated and approved for publish a second time, Article A and Image B must be approved for publish again.

Correct Answer: CF

---

**QUESTION 3**

Your client has an existing video streaming service that is performing well. Videos are of high definition and can measure in gigabytes of data each. The Marketing team wants the ability to allow its editors to embed videos in the middle of their CKedit body attributes, with the stipulation that there is no need for any coding for the editors. Assume that the editors already know how to use all the OOTB features of CKedit. Additionally, the Marketing team wants video links to appear

in lists with other heterogeneous assets throughout the website.

Which solution will best meet these requirements?

- A. Create a basic asset that has several metadata attributes, one of which stores a reference to the video stream server URL. Create a typed template that builds the JavaScript code to render the video "in situ."
- B. Train the editors to simply type the URL of the video server in their CKedit body attribute by using the source code feature.
- C. Migrate the video blob data to the WebCenter Sites database as assets. Create a typed template that streams each video asset via blob server tags "in situ" just like any other blob asset.
- D. Create a flex video asset definition that has a single attributes that stores the JavaScript to embed the video player. Create a template that simply streams the JavaScript "in situ."

Correct Answer: D

---

#### QUESTION 4

Which two items does the searchengineintegrationframework work in conjunction with?

- A. Queue Management
- B. Mirror Publishing
- C. Event Management
- D. WSDT
- E. Cache Management

Correct Answer: BE

---

#### QUESTION 5

In what two ways would you cause a flex filter to be executed on an existing asset?

- A. by bulk approving the asset
- B. by editing or saving the asset one by one in the UI
- C. by simulating the edit or save operation on each asset programmatically (asset:load and asset:save)
- D. by republishing the asset

Correct Answer: BC
