QUESTION 1

You have decided to define your own focused and customized SOA Governance Model with an accompanying continuous improvement feedback loop. The continuous improvement feedback loop is executed upon receiving one or more event notifications. Your service bus vendor announces that a stable and mature SOA security standard is now available in the latest version of the product. Which event would need to be published to initiate the continuous Improvement feedback loop?

- A. Strategic Change
- B. Vendor Revision
- C. Operational Exception
- D. SOA Maturity Level Change
- E. Technology Revision
- F. Periodic

Correct Answer: C

QUESTION 2

When the SOA roadmap process is described to a customer, the customer balks at the approach because the first step in the process is a current state analysis. From past experience the customer has seen current state assessments that took months to complete. The customer is not willing to spend months on another current state assessment. How is this customer issue addressed by the SOA roadmap development approach?

- A. The scope of the current state assessment is limited to one business unit at a time. This keeps the length of the assessment to approximately two weeks.
- B. The current state assessment is performed by evaluating the maturity and adoption of capabilities in the SOA Maturity Model. This narrow focus allows the assessment to be completed in approximately two weeks.
- C. The scope of the current state assessment is restricted to the projects that the Project Selection Framework identified as the best SOA projects. This limited set of projects can be assessed in approximately two weeks.
- D. The current state assessment is time boxed to two weeks. At the end of the two weeks, the current state assessment is deemed complete and the next step in the roadmap creation process is begun.
- E. The current state assessment is done by reviewing documents provided by the customer. Two weeks is sufficient to review the documents and determine the current state.

Correct Answer: B

QUESTION 3

A consumer invokes a synchronous request/response but the service only supports asynchronous request/response. Which service infrastructure capability resolves the differences between the invocations of the consumer and provider?

- A. Transport Mediation
- B. Transformation Mediation
- C. Service Routing
- D. Message Exchange Pattern Mediation
- E. Dynamic Binding

Correct Answer: C

QUESTION 4

The service lifecycle is shown in the exhibit. Some stages of the lifecycle are missing their labels What are the missing stages?

- A. Justified, Not Justified, Assigned, Defined, Implemented, Retired
- B. Justified, Not Justified, Defined, Assigned, Implemented, Retired
- C. Approved, Rejected, Defined, Assigned, Implemented, Retired
- D. Justified, Not Justified, Assigned, Defined, Implemented, Deprecated
- E. Approved, Rejected, Assigned, Defined, Implemented, Deprecated

Correct Answer: C

QUESTION 5

How should the stated service-oriented Integration architecture principles be applied at an organization?

- A. All of the architecture principles must be followed. If any of the principles are violated, the architecture is not service oriented.
- B. The organization should review and evaluate the architecture principles, and then derive their own architecture principles that match their specific environment and goals.
- C. An organization can add additional architecture principles, but the stated architecture principles must be followed.
- D. An organization can decide to not enforce one or more of the architecture principles, but additional architecture principles will not be needed.
- E. The architecture principles define what products will be used in the architecture, so the architecture principles must be adjusted to reflect the chosen products.

Correct Answer: B
