### QUESTION 1

Your solution needs to validate, transform, and route data. You want to deploy the capability as a Service Component Architecture (SCA) composite application. You would most likely use a \_\_\_\_\_ to provide the functionality.

- A. Proxy service
- B. Business service
- C. BPEL service
- D. Spring component
- E. Mediator

Correct Answer: E

The primary building block of a mediation flow is called a mediation task. Mediation tasks are primitives that implement ESB functions such as logging, data transformation, routing, and so on.

---

### QUESTION 2

A partner needs to access services that are defined in one of your Service Composite Architecture (SCA) applications via a web service interface. Which approach (and accompanying reasoning) describes a loosely coupled and robust solution?

- A. Use Oracle Service Bus to provide an Interface layer over your SCA application. This enables you to hide the locations of your SCA application, perform load-balancing across those endpoints, and provide the ability to define service level agreements to help ensure that you are meeting your contractual obligations to the partner.
- B. Use the Mediator component to provide a web service interface to your SCA application. This arrives you the flexibility of using the industry standard XSLT technology to perform translation and transformations.
- C. Use Oracle Service Bus to provide an interface layer over your SCA application. This enables you to "skin" your SCA application with a web service interface and still provide a robust experience to the partner.
- D. Allow the partner simply to connect directly to the SCA application. This provides the best performance and helps keep the partner happy.

Correct Answer: A

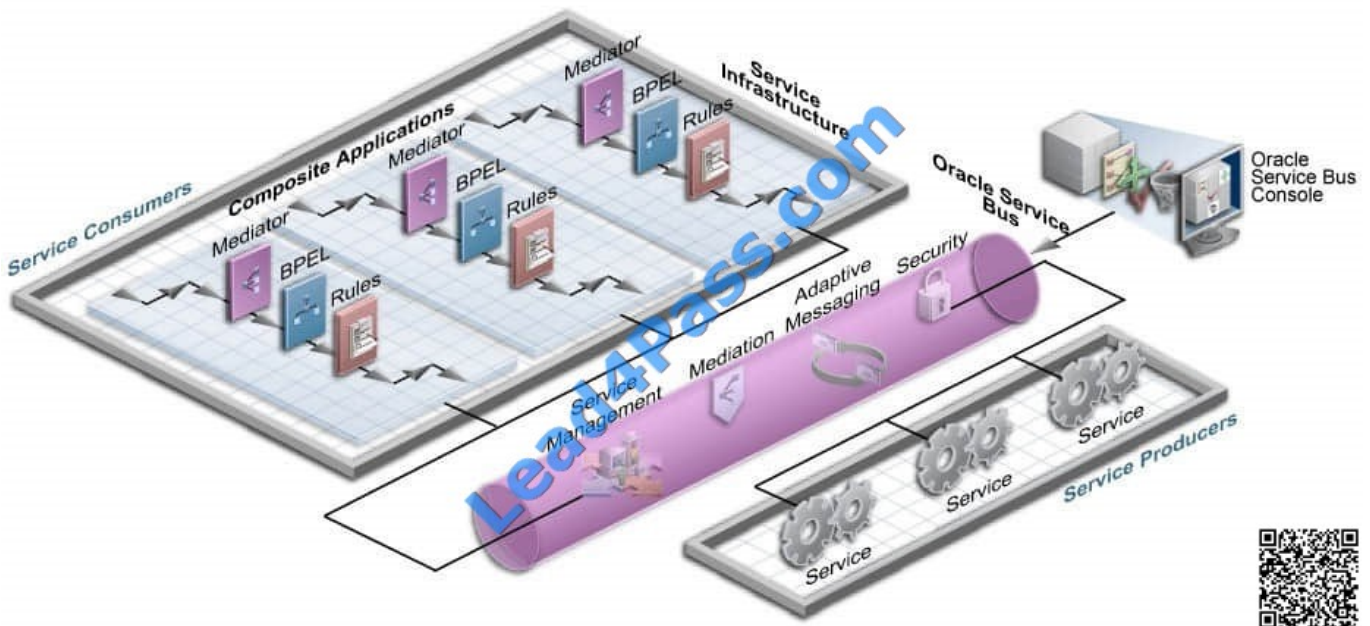

\*

Oracle Service Bus supports the following capabilities for the transformation or processing of messages:

/ Transforms messages based on XQuery or XSLT etc: Validates incoming messages against schemas Selects a target service or services, based on the message content or message headers Transforms messages based on the target service Supports transformations on both XML and MFL messages Message enrichment Supports callouts to Web services to gather additional data for transformation (for example, country code, full customer records, and so on)

\*

Oracle Service Bus Intermediary

### QUESTION 3

Which statement is correct about a JCA common client interface?

- A. The JCA binding component uses the JCA common client Interface APIs to communicate with the resource adapter.
- B. The resource adapter uses the common client interface APIs to communicate with the EIS.
- C. The resource adapter implements the standard MessageListener interface to poll for events from the EIS.
- D. The application server uses the common client interface APIs to commune with the EIS.

Correct Answer: A

Note:

\*

The Common Client Interface (CCI) is the JCA-recommended client API for all resource adapters.

\*

A resource adapter is a system-level software driver that enables J2EE components to communicate with a back-end enterprise information system (EIS) through a JCA-compliant application server when a resource adapter for the specific EIS is deployed to the server.

### QUESTION 4

Which two statements are true about messages that are marked "Exhausted" on the Recovery tab of the BPEL service engine in Enterprise Manager Fusion Middleware Control?

- A. They are messages that have exceeded the maximum number of auto recovery attempt.

- B. They can be marked again For auto recovery by using the "Reset" feature in the recovery console.
- C. Rejected messages are directly marked as "Exhausted."
- D. The "Refresh Alarm table" option can be used to resubmit Exhausted messages.
- E. Exhausted messages for Mediator components can be manually recovered from the same location in Fusion Middleware Control.

Correct Answer: AE

\* Go to BPEL Recovery Console Access the Recovery page of the BPEL process service engine to perform message recovery. You can also access the Recovery page later by selecting Service Engines > BPEL from the SOA Infrastructure menu and clicking the Recovery tab in the resulting page.

---

#### QUESTION 5

You want to define a now event to be managed by the Event Delivery Network (EDN). The XSD is in place that defines the element that is to be the basis of the new event. Which step do you perform next?

- A. Create a new event definition in the SOA Composite Editor.
- B. Use an editor to create the event using Event Definition Language (EDL) syntax.
- C. Create the now event definition as you configure the invoke activity that publishes the event in your BPEL process.
- D. Use Enterprise Manager to register the new event to EDN.

Correct Answer: A
