QUESTION 1

You need to display a text value based on variance data in an ASO database. If the variance percentage is less than 10, users should see "Low Priority," if the variance percentage is between 11 and 25, users should see "Medium Priority," and if the variance percentage is greater than 25, users should see High Priority." The Essbase feature that supports this capability is:

- A. Text List
- B. Format string
- C. Text data type of a measure
- D. Trigger
- E. Not possible in an ASO database

Correct Answer: B

Using format strings, you can format the values (cell contents) of Essbase database members in numeric type measures so that they appear, for query purposes, as text, dates, or other types of predefined values. The resultant display value is the cell's formatted value (FORMATTED_VALUE property in MDX). The underlying real value is numeric, and this value is unaffected by the associated formatted value. Format strings enable you to display more meaningful values in place of raw numeric values. For example, using a text based formatted value, you might display data cells as "High," "Medium," and "Low."

To use a format string you just have enable types measures on your outline, then in the member properties for "Associate format string" use the syntax :-MdxFormat (string_value_expression)A simple example isMdxFormat(IIF(CellValue()

QUESTION 2

Identify the three invalid methods to back up ASO database.

- A. MaxL alter database commands
- B. Esscmd BEGINARCHIVE / ENDARCHIVE
- C. Backup and Recovery features introduced In version 11
- D. Operating System backup

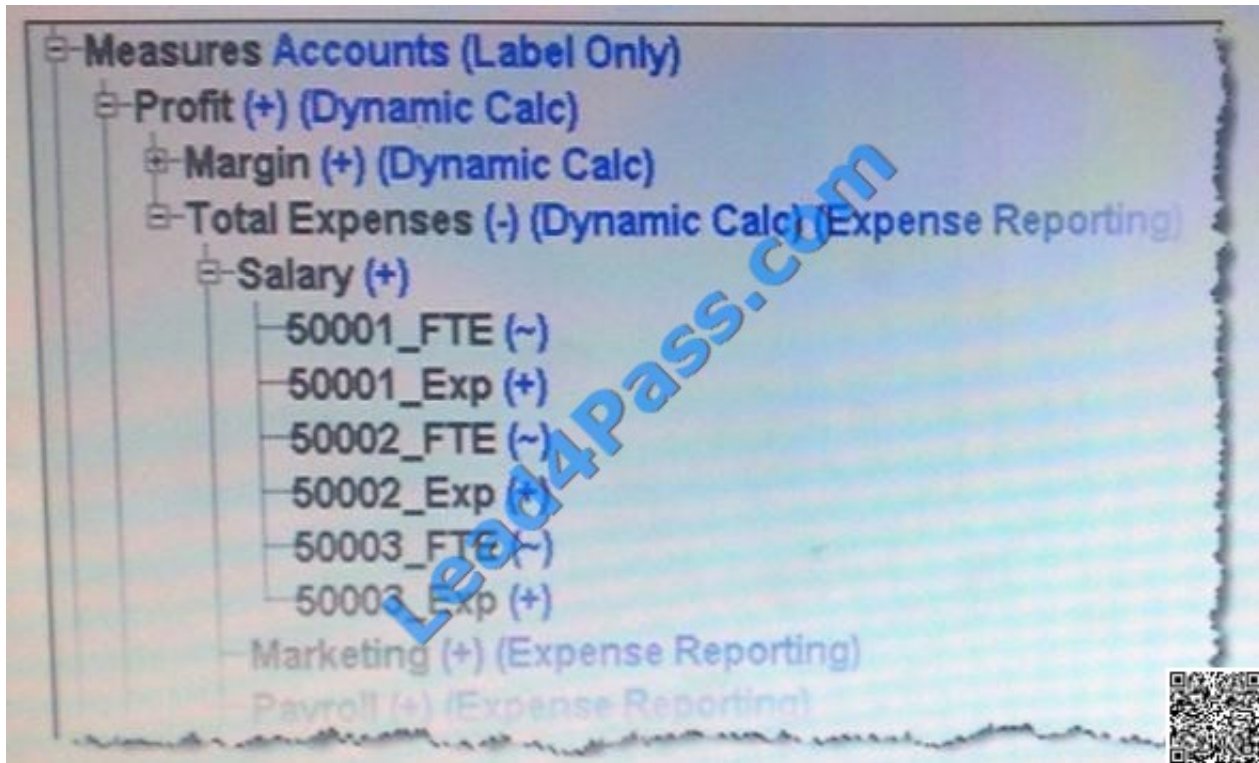

Correct Answer: ACD

A: the MaxL statement alter database begin archive do not support aggregate storage databases.

D: Operating System backup cannot backup the ASO database.

QUESTION 3

Which two options would provide a better design for the following accounts and metrics?

- A. If there are a small number of accounts that require FTE and Expense dollars, split Accounts and Metrics into 2 dimensions
- B. If there are a large number of accounts that require FTE and Expense dollars, split Accounts and Metrics into 2 dimensions
- C. If reporting dictates FTE and dollars in the columns and accounts in the rows, split Accounts and Metrics into 2 dimensions
- D. If block size is large, then keep Accounts and Metrics as one dimension with a dense dimension

Correct Answer: BD

Use Application Design Best Practices, Minimize the number of dimensions, Avoid Repetition in dimensions, Avoid inter dimensional irrelevance.

QUESTION 4

What security filter will assign security to hierarchy, filtering the members displayed to end users?

- A. Read Filter
- B. Write Filter
- C. Metaread Filter
- D. Metadata Filter

E. Not possible to secure dimensions; only data can be secured

Correct Answer: C

Metaread Essbase filters will filter both dimensions and data for end users. Meta Read Filters provide data and member level security.

QUESTION 5

Assuming Sales and Year are sparse and Actual is dense, what two actions will the following calc script perform?

```
FIX (Actual, @CY, Sales) DATAEXPORT "BINFILE" "data.txt"; ENDFIX
```

- A. Export the data for actual, current year, sales into a text file called data.txt
- B. Export the data for actual, current year into a text file called data.txt
- C. Export data blocks in a compressed encrypted format
- D. Create a text file that can be imported using the DATAIMPORTBIN calc command in another database that has different dimensionality

Correct Answer: AC

The FIX...ENDFIX command block restricts database calculations to a subset of the database. All commands nested between the FIX and ENDFIX statements are restricted to the specified database subset.

Syntax:

```
FIX (fixMbrs)COMMANDS ;ENDFIX
```

fixMbrs: A member name or list of members from any number of database dimensions.

DATAEXPORT writes data to a text file, binary file, or as direct input to a relational file using ODBC. The data blocks will be saved in a compressed encrypted format to a text file. For a binary output file: DATAEXPORT "Binfile" "fileName"
