**QUESTION 3**

The Value dimension stores detail from child to parent for which dimension?

- A. View
- B. Entity
- C. Account
- D. Currency
- E. Scenario

Correct Answer: B

The Value dimension represents the different types of values stored in your application, and can include the input currency, parent currency, adjustments, and consolidation detail such as proportion, elimination, and contribution detail. For example, the Entity Currency member stores the value for an entity in its local currency. The Parent Currency member stores the value for an entity translated to the currency of its parent entity. The Value dimension is useful for

providing an audit trail of the transactions applied to data.
