QUESTION 1

EnterpriseOne Object Management Workbench is the centralized change management facility for maintaining EnterpriseOne objects in the system. Object location is very important to understand as an EnterpriseOne administrator. Which option best describes the way object specifications for an Application (P55TEST) flow during a Check-IN to the DV path code (project status 21)?

- A. Specifications are copied from the local workstation\\'s /spec folder to the Deployment Server\\'s /spec folder.
- B. Specifications are copied from the local workstation\\'s RDB database (SSE or OEE. and to the DV Central Objects database.
- C. Specifications are copied from the local workstation\\'s RDB database (SSE or OEE. and to the DV Central Objects database. The source (P55TEST.C) and include (P55TEST.h) files are copied from the workstation\\'s /source and /include to the Deployment Server\\'s /source and /include.
- D. Specifications are copied from the local workstation\\'s RDB database (SSE or OEE. and to the DV Central Objects database. The include (P55TEST.h) file is copied from the workstation\\'s /include to the Deployment Server\\'s /include.
- E. Specifications are copied from the local workstation\\'s RDB database (SSE or OEE. and to the DV Central Objects database. The source (P55TEST.c) file is copied from the workstation\\'s /include to the Deployment Server\\'s /include.

Correct Answer: D

QUESTION 2

When selecting a Path Code Database as part of the EnterpriseOne Platform Pack installation, which two get installed on the server?

- A. System/Foundation code
