-  **800,000+** Satisfied Customers

**QUESTION 1**

Oracle VM Server 2.2 consists of which two software components?

- A. Oracle Database XE
- B. Oracle Enterprise Linux 5.3
- C. Xen Hypervisor
- D. Oracle Containers for Java (OC4J)
- E. Oracle WebLogic Server (WLS)

Correct Answer: BC

---

**QUESTION 2**

In Oracle 2.2.x under which directory does each repository create a mount point and what is the name of subdirectory?

- A. Each repository will create mount point under /OVS, with a directory named using the UUID of the respiratory.
- B. Each repository will create a mount point under /var/ovs, In a directory named using the UUID ofthe repository.
- C. Each repository will create a mount point under /var/ovs/mount, in a directory named using theUUID of the repository.
- D. Each repository will create a mount point under /OVS, with a directory named using a sequencenumber starting at 0.
- E. Each repository will create a mount point under /var/ovs, with a directory named using a sequence number starting at 0.
- F. Each repository will create a mount point under /var/ovs/mount, with a directory named using a sequence number starting at 0.

Correct Answer: C

**QUESTION 3**

Networking is not working for several guests on a particular host. Which two commands can help troubleshoot the

networking?

- A. `xm list -l` will show all of the network interfaces for all of the virtual machines, which can be used to see which bridge is having problems.
- B. `config_network.py -l` will show which network interfaces are in use, and which are having problems.
- C. `brctl show` will show the status of each bridge, and which VIFs are connected to it. This can then be used to determine which bridge is having problems.
- D. `System-config-network` will list the virtual interfaces, which can be inspected to see which are having problems.
- E. `ifconfig -a` will show a list of all network interfaces and their current status, which will help determine which bridge is having problems.

Correct Answer: CE

---

#### QUESTION 4

What command will show the current status of all Oracle VM Agent components?

- A. `service ovs status`
- B. `xm show ovs-agent`
- C. `service ovs-agent status`
- D. `repos.py -l`
- E. `xm dmesg`

Correct Answer: C

---

#### QUESTION 5

A customer is running an existing server farm of open source Xen servers running the same version of Xen as Oracle VM 2.2. The customer would like to manage these servers with Oracle VM.

What is the best reason that this will not be possible?

- A. Oracle VM's Xen implementation uses a different disk format for virtual machines than open source Xen, so live migration of virtual machines will not work between the existing Xen implementation and Oracle VM.
- B. Oracle VM employs a layer of technology on top of Xen that enables remote management through Oracle VM Manager or Oracle Enterprise Manager. The existing Xen servers are incapable of communicating in this manner.
- C. Oracle VM uses a forked Xen distribution, so although the version numbers are the same, the behavior of the virtual machines at run time will be different.

D. Oracle VM uses a highly proprietary protocol format for Live Migration that enables strong encryption. Standard Xen servers will not be able to live migrate to the Oracle VM servers, or vice versa.

Correct Answer: B
