-  **800,000+** Satisfied Customers

### QUESTION 1

What would be the total space required for Clusterware files when stopping them in the ASM Diskgroup configured with NORMAL redundancy? (Assume each OCR and voting Disk files uses 300 MB.)

- A. 1.5 GB
- B. 2.4 GB
- C. 600 MB
- D. 900 MB

Correct Answer: A

When you use normal redundancy, Oracle Clusterware automatically maintains two copies of the OCR file and three copies of the voting disk file. Reference: About Oracle Clusterware

---

### QUESTION 2

Is not a valid option for configuring redundancy for ASM disk groups?

- A. Internal
- B. Normal
- C. High
- D. External

Correct Answer: A

There are three types of disk groups based on the ASM redundancy level. The redundancy levels are:

\*

External redundancy

ASM does not provide mirroring redundancy and relies on the storage system to provide RAID functionality. Any write error cause a forced dismount of the disk group. All disks must be located to successfully mount the disk group.

\*

Normal redundancy

ASM provides two-way mirroring. By default all files are mirrored so that there are two copies of every data extent. A loss of one ASM disk is tolerated.

\*

High redundancy

ASM provides triple mirroring by default. A loss of two ASM disks in different failure groups is tolerated.

---

### QUESTION 3

You want to set full debugging for the communications and resource management components for the CRS module on nodes host01 and host03. How can you accomplish this?

- A. `crsctl set log CRS "CRSCTL: 5, CRSCOMM: 5" nodelist host01, host03`
- B. `crsctl ismodules crs set log CRSCTL: 5, CRSCOMM: 5 nodelist host01, host03`
- C. `srvctl set log m CRSCTL5, CRSCOMM 5 n host01, host03`
- D. `ocrconfig set log CRS "CRSCTL, CRSCOMM: 5" nodelist host 01, host03`

Correct Answer: A

To set log levels for the CRSCTL and CRSCOMM components of the CRS module: `$ crsctl set log crs "CRSCTL=1,CRSCOMM=2"`

Reference: Oracle Clusterware Administration and Deployment Guide, CRSCTL Utility Reference

---

### QUESTION 4

Which tool can be used to specify network interfaces and to retrieve component configuration information?

- A. CVU
- B. SRVCTL
- C. CRSCTL
- D. OIFCFG

Correct Answer: D

The Oracle Interface Configuration (OIFCFG) command-line interface helps you to define and administer network interfaces. You can issue OIFCFG commands in single-instance and Oracle Clusterware environments to:

Allocate and deallocate network interfaces to components  
Direct components to use specific network interfaces  
Retrieve component configuration information

Reference: Oracle Interface Configuration (OIFCFG) Command Reference

---

### QUESTION 5

Which two statements about ASM paths and file names are correct?

- A. Absolute paths must begin from the root directory of the server.
- B. Relative paths start from the Grid Infrastructure home directory.

- C. When an Oracle ASM file is created with an alias file name, you can access the file with either name.
- D. Absolute paths can access a file or directory regardless of the current directory.

Correct Answer: CD

C: Alias names, or aliases, are intended to provide a more user-friendly means of referring to Oracle ASM files, rather than using the system-generated filenames.

You can create an alias for a file when you create it in the database, or you can add an alias to an existing file using the ADD ALIAS clause of the ALTER DISKGROUP statement. You can create an alias in any system-generated or user-created Oracle ASM directory. An alias must include the disk group name; you cannot create an alias at the root level (+).
