QUESTION 1

Given the code fragment:

```
SimpleDateFormat sdf;  
sdf = new SimpleDateFormat("zzzz", Locale.US);  
System.out.println("Result: " + sdf.format(today));
```

What type of result is printed?

- A. Time of the Epoch (in milliseconds)
- B. Julian date
- C. Era
- D. Time zone abbreviation
- E. Full-text time zone name

Correct Answer: E

Output could be:

Result: Central European Time

Note: To make the code work you would need the following code which get today's date in Java.

```
Date today = new Date();
```

Reference: <http://www.java67.com/2013/01/how-to-format-date-in-java-simpledateformat-example.html>

QUESTION 2

Given: and the code fragment:

```
class Person {  
    private String firstName;  
    private int salary;  
    public Person(String fN, int sal) {  
        this.firstName = fN;  
        this.salary = sal;  
    }  
    public int getSalary() { return salary; }  
    public String getFirstName() {return firstName; }  
}
```

```
List<Person> prog = Arrays.asList(  
    new Person("Smith", 1500),  
    new Person("John", 2000),  
    new Person("Joe", 1000));  
double dVal = prog.stream()  
    .filter(s -> s.getFirstName().startsWith("J"))  
    .mapToInt(Person::getSalary)  
    .average()  
    .getAsDouble();  
System.out.print(dVal);
```

What is the result?

- A. A compilation error occurs.
- B. 2000.0
- C. 1500.0
- D. 0.0

Correct Answer: A

The line `mapToInt(Person::GetSalary)` will cause a compile error.

If it is replaced by the following line, a "." is added in the beginning of the line, the result would be 1500.0:

```
.mapToInt(Person::getSalary)
```

QUESTION 3

Which two elements must be present in any valid pipeline? (Choose two.)

- A. a lambda expression or a method reference
- B. a source

- C. one or more intermediate operations
- D. a reduction operation
- E. a terminal operation

Correct Answer: BE

A stream pipeline consists of a source (such as a Collection, an array, a generator function, or an I/O channel); followed by zero or more intermediate operations such as Stream.filter or Stream.map; and a terminal operation such as Stream.forEach or Stream.reduce.

Reference: <https://docs.oracle.com/javase/8/docs/api/java/util/stream/package-summary.html>

QUESTION 4

Given the following incorrect program:

```
class MyTask extends RecursiveTask<Integer> {
    final int low; final int high;
    static final int THRESHOLD = /*...*/;
    MyTask(int low, int high) { this.low = low; this.high = high; }
    Integer computeDirectly() { /*...*/ }
    protected void compute() {
        if (high - low <= THRESHOLD)
            return computeDirectly();
        int mid = (low + high) / 2;
        invokeAll(new MyTask(low, mid), new MyTask(mid, high));
    }
}
```

Which two changes make the program work correctly? (Choose two.)

- A. The MyTask class must be modified to extend RecursiveAction instead of RecursiveTask.
- B. The computeDirectly() method must be enhanced to fork() newly created tasks.
- C. The compute() method must be changed to return an Integer result.
- D. The THRESHOLD value must be increased so that the overhead of task creation does not dominate the cost of computation.
- E. Results must be retrieved from the newly created MyTask instances and combined.
- F. The midpoint computation must be altered so that it splits the workload in an optimal manner.

Correct Answer: CE

The compute() method must return an Integer result. The results of the InvokeAll tasks must be combined.

Incorrect Answers:

A: RecursiveAction is just like RecursiveTask except it does not return a result

F: The Midpoint, $mid = (low + high)/2$, is fine. Reference: <http://www.baeldung.com/java-fork-join>

QUESTION 5

Given: What is the result when you compile the code and execute the command: `java MyApp kava`

```
public class MyApp {
    public static void main(String[] args){

        String var = args.length == 1?args[0]: "Kava";

        switch (var.replace('v','w')){
            case "kava" :
                System.out.println("kava"); break;
            case "Kava" :
                System.out.println("Kava"); break;
            case "kawa":
                System.out.println("kawa"); break;
            case "Kawa":
                System.out.println("Kawa"); break;
        }
    }
}
```

- A. kava
- B. Kava
- C. kawa
- D. Kawa
- E. An exception is thrown at runtime.

Correct Answer: D
