QUESTION 1

Which of the following is true of the mysqldump client program?

- A. It can only backup tables from MyISAM.
- B. It can only backup tables from InnoDB.
- C. It can only backup tables from MyISAM and InnoDB.
- D. It can backup tables from any of the available storage engines.

Correct Answer: D

32.4.2. Making Text Backups with mysqldump It works for tables created by any storage engine.

QUESTION 2

The CHECK TABLE command should be used...

- A. To make sure a table has no structural problems.
- B. To find out why a query takes a long time to execute on a given table.
- C. To make sure that no table data are corrupted.
- D. to improve performance by updating index distribution statistics on InnoDB tables.
- E. To repair table structure problems.

Correct Answer: ACD

30.2.1. CHECK TABLE

The CHECK TABLE statement performs an integrity check on table structure and contents. It works for MyISAM and InnoDB tables. For MyISAM tables, it also updates the index statistics. If the table is a view, CHECK TABLE verifies the view

definition.

If the output from CHECK TABLE indicates that a table has problems, the table should be repaired.

QUESTION 3

Which of the following are requirements for MyISAM binary portability?

- A. Both machines must use the same operating system.
- B. Database and table names must use lowercase format.
- C. Both machines must use IEEE floating-point format or contain no floating-point columns.

D. Both machines must use two's-complement integer arithmetic.

Correct Answer: BCD

32.3.4. Conditions for Binary Portability

MyISAM tables and InnoDB tablespaces are binary portable from one host to another if two conditions are met:

Both machines must use two's-complement integer arithmetic. Both machines must use IEEE floating-point format, or else the tables must contain no floating-point columns (FLOAT or DOUBLE). In practice, those two conditions pose little

restriction. Two's-complement integer arithmetic and IEEE floatingpoint format are the norm on modern hardware.

A third condition for InnoDB binary portability is that you should use lowercase names for databases and tables. This is because InnoDB stores these names internally (in its data dictionary) in lowercase on Windows.

Using lowercase names allows binary portability between Windows and Unix. To force the use of lowercase names, you can put the following lines in an option file:

```
[mysqld]
```

```
lower_case_table_names=1
```

QUESTION 4

Some statements implicitly commit pending transactions and start a new one.

A. True

B. False

Correct Answer: A

29.4.3. The InnoDB Transaction Model

If you issue any of the following statements, InnoDB implicitly commits the preceding uncommitted statements of the current transaction and begins a new transaction:

```
ALTER TABLE BEGIN CREATE INDEX DROP DATABASE DROP INDEX DROP TABLE RENAME TABLE  
TRUNCATE TABLE LOCK TABLES UNLOCK TABLES SET AUTOCOMMIT = 1 START TRANSACTION
```

QUESTION 5

The OPTIMIZE TABLE command should be used...

A. To increase performance by defragmenting the table.

B. To improve performance by sorting indexes.

C. To improve performance by updating index statistics.

- D. To correct problems with a MyISAM table that have become corrupted.
- E. To check a tables structure to see if it may have been damaged and needs repair.

Correct Answer: ABC

30.2.4. OPTIMIZE TABLE

The OPTIMIZE TABLE statement cleans up a MyISAM table by defragmenting it. This involves reclaiming unused space resulting from deletes and updates, and coalescing records that have become split and stored non-contiguously.

OPTIMIZE TABLE also sorts the index pages if they are out of order and updates the index statistics.
