QUESTION 1

The `/etc/default/passwd` file contains a number of configuration parameters that can be used to constrain the character composition of user passwords. What is one of the dangers of having password composition too tightly constrained?

- A. Password complexity rules apply only to the English alphabet.
- B. The entropy of the resulting password strings will be very high.
- C. Duplication of encrypted user password strings is much more likely.
- D. Limited password value possibilities can simplify brute force attacks.
- E. Passwords are harder to compute when using many character classes.

Correct Answer: D

QUESTION 2

The company security policy now requires very detailed auditing of all actions. This includes capturing all executed commands together with their arguments and the environment variables. After activating auditing on all Solaris 10 systems, the security auditor complains about having to check the audit trail on each individual host. He asks for a central place to capture all audit trails. Using standard Solaris 10 security features, which is a solution to this problem?

- A. Configure `auditd` to send email with the events.
- B. Configure `auditd` to send the output using `syslog` to a central `loghost`.
- C. Configure `auditd` to store the audit trail using NFS on a central server.
- D. Configure `auditd` to store the audit trail using LDAP in a central directory.

Correct Answer: C

QUESTION 3

A security administrator has been asked to construct a Solaris Security Toolkit security profile (that is, driver) to enable Solaris Auditing. If the security administrator starts with the `secure.driver` profile, which Finish script must be added to enable Solaris Auditing?

- A. `enable-bsm.fin`
- B. `install-bsm.fin`
- C. `enable-auditing.fin`
- D. `install-auditing.fin`

Correct Answer: A

QUESTION 4

After receiving the results from a recent security compliance evaluation, a security administrator was told to ensure that every user has to change their password regularly. After enabling password aging in the `/etc/default/passwd` file, the security administrator finds that existing local users are still not being forced to change their password. What is the reason for this?

- A. Users have disabled password aging for their own accounts.
- B. The password aging capability does NOT apply to local users.
- C. Password aging is made active after a user's next password change.
- D. The `/etc/default/passwd` file is NOT consulted for password aging.
- E. The `/etc/user_attr` file has been configured to prevent password aging.

Correct Answer: C

QUESTION 5

A cryptographically signed patch provides system administrators with assurance that the patch possesses certain qualities. Which two qualities are assured when a patch signature is verified? (Choose two.)

- A. The patch has a verified origin.
- B. The patch has NOT been modified since it was signed.
- C. The patch was created by a Sun Certified Systems Engineer.
- D. The contents of the patch have NOT been revealed to anyone who does NOT have a Sun service plan.

Correct Answer: AB
