### QUESTION 1

Suppose you have two nodes called node1 and node2, and each of them has a non-global zone running called zone1.

Which two commands register a failover resource group named apache-rg to be potentially mastered on both non-global zones? (Choose two.)

- A. `cldg create -z zone1 apache-rg`
- B. `cldg create -n node1,node2 -z zone1 apache-rg`
- C. `cldg create -n zone1@node1,zone1@node2 apache-rg`
- D. `cldg create -n node1:zone1,node2:zone1 apache-rg`

Correct Answer: BD

---

### QUESTION 2

You have a four-node cluster with all nodes connected to the storage with a diskset disk-ds1 configured on the shared storage.

(a)

What are the default number of secondaries?

(b)

How do you alter the number of secondaries so that there is a primary node and the remainder are all secondaries?

A.

(a) All nodes are primaries or secondaries by default.

(b) You do not need to alter anything.

B.

(a) There is one secondary by default.

(b) Run the commands:

```
cldg set -p numsecondaries=4 disk-ds1
```

```
cldg show disk-ds1
```

C.

(a) There is one secondary by default.

(b) Run the commands:

```
cldg set -p numsecondaries=3 disk-ds1
```

cldg show disk-ds1

D.

(a) There are no secondaries by default

(b) Run the commands:

```
cldg set -p numsecondaries=3 disk-ds1
```

```
cldg show disk-ds1
```

Correct Answer: C

---

### QUESTION 3

In Sun Cluster 3.2 a logical host's address is flagged as deprecated.

Which statement is true for the deprecated flag?

A. The deprecated flag is applicable for logical hosts and test addresses only.

B. The logical host address is always the source address in an outbound connection.

C. The logical address is never picked as the source address in an outbound connection.

D. It is impossible to remove the deprecated flag on a logical host by an additional resource.

Correct Answer: C

---

### QUESTION 4

A three-node cluster contains three resource groups which have these Nodelists:

one-rg has a Nodelist: node1 node2 node3

two-rg has a Nodelist: node2 node3 node1

three-rg has a Nodelist: node3 node1 node2

The Fallback property on each of the resource groups is set to FALSE.

Following a maintenance outage in which node1 and node2 have been shut down and rebooted into the cluster with node1 joining the cluster before node2:

Where will the resource groups be located, and which command should be run to move the resource groups to their preferred nodes?

A. one-rg will be on node1 two-rg will be on node2 three-rg will be on node3 No command will need to be run.

B. one-rg will be on node3 two-rg will be on node3 three-rg will be on node3 clrg remaster +

C. one-rg will be on node1 two-rg will be on node1 three-rg will be on node3 clrg remaster +

D. one-rg will be on node3 two-rg will be on node3 three-rg will be on node3 clrg evacuate -n node3 +

Correct Answer: B

---

#### QUESTION 5

Suppose you have a resource apache-rs and you were informed that its state is in STOP\_FAILED on node1. Which command is needed prior to starting this resource again?

- A. clrs set -n node1 -f STOP\_FAILED apache-rs
- B. clrs clear -n node1 -f STOP\_FAILED apache-rs
- C. clrs reset -n node1 -f STOP\_FAILED apache-rs
- D. clrs disable -n node1 -f STOP\_FAILED apache-rs

Correct Answer: B
