QUESTION 1

Consider the ANALYZE TABLE command.

In which two situations should this command be used?

- A. when you want to check a tables structure to see if it may have been damaged and needs repair
- B. when you need to find out why a query is taking a long time to execute
- C. when you want to update index distribution statistics
- D. after large amounts of table data have changed

Correct Answer: CD

QUESTION 2

What are two benefits of using the --tab option with mysqldump? (Choose two.)

- A. The schema and data are automatically dumped to separate files.
- B. It is possible to restore the data in parallel.
- C. It can be used together with --all-databases.
- D. It can be piped directly into a running server.

Correct Answer: BC

QUESTION 3

You want to use the Performance Schema to get the equivalent of SHOW FULL PROCESSLIST.

Which three statements are true? (Choose three.)

- A. The performance impact is less than SHOW FULL PROCESSLIST.
- B. The PROCESS privilege is required.
- C. The events_statements_current consumer must be enabled.
- D. A connection must be instrumented to be included in the list of processes.
- E. The sys.session view provides the process list with additional information.

F. The threads table contains all the required columns.

Correct Answer: BCF

The PROCESS privilege also enables use of SHOW ENGINE.

The threads table columns with names having a prefix of PROCESSLIST_ provide information similar to that available from the INFORMATION_SCHEMA.PROCESSLIST table or the SHOW PROCESSLIST statement.

QUESTION 4

SQL injection is a common security threat.

Which two methods would help protect against this risk?

- A. using stored procedures to validate values that are input
- B. using SQL variables to secure input values
- C. using prepared statements to handle unsecured values
- D. installing the SQL Protection plugin to catch such attempts
- E. starting the server with the ?injection-protection command-line option.

Correct Answer: AB

QUESTION 5

A MySQL database uses all InnoDB tables and is configured as follows; You will be setting up a replication slave by using mysqldump. You will need a consistent backup taken from your running production server. The process should have minimal impact to active database connections.

```
shell> cat /etc/my.cnf
```

```
[mysqld]
```

```
log-bin
```

```
server-id=1
```

Which two arguments will you pass to mysqldump to achieve this? (Choose two.)

- A. --skip-opt
- B. --lock-all-tables
- C. --create-apply-log
- D. --single-transaction
- E. --master-data

Correct Answer: AB
