QUESTION 1

Assume you would like to receive notification from the container as a stateless session bean transitions to and from the ready state. Which of the following life cycle back annotations would you use? (Choose one.)

- A. @PostConstruct, @PostDestroy
- B. @PostConstruct, @PreDestroy
- C. @PreConstruct, @PostDestroy
- D. @PostConstruct, @PostDestroy, @Remove
- E. @PostConstruct, @PreDestroy, @Remove

Correct Answer: B

The Lifecycle of a Stateless Session Bean The EJB container typically creates and maintains a pool of stateless session beans, beginning the stateless session bean's lifecycle. The container performs any dependency injection and then invokes the method annotated @PostConstruct, if it exists. The bean is now ready to have its business methods invoked by a client.

At the end of the lifecycle, the EJB container calls the method annotated @PreDestroy, if it exists. The bean's instance is then ready for garbage collection.

Lifecycle of a Stateless Session Bean:

Note: An enterprise bean goes through various stages during its lifetime, or lifecycle. Each type of enterprise bean (stateful session, stateless session, singleton session, or message-driven) has a different lifecycle.

Reference: <http://docs.oracle.com/javaee/6/tutorial/doc/gjplj.html>

QUESTION 2

How many interceptor classes can be applied to a single stateful session bean?

- A. a maximum of one
- B. any number may be applied
- C. one for each business method
- D. one for each business interface

Correct Answer: B

The @Interceptors annotation can take an array of classes, so you can bind more than one class-level interceptor this way, e.g.

@Stateless

```
@Interceptors ({TracingInterceptor.class, SomeInterceptor.class}) public class EmailSystemBean {  
...  
}
```

Reference: EJB Interceptors

<http://docs.jboss.org/ejb3/app-server/tutorial/interceptor/interceptor.html>

QUESTION 3

A Java EE application contains a session bean which uses a security role USER. A group called people is defined on an LDAP server. Which two define appropriate EJB role responsibilities? (Choose two.)

- A. The deployer defines and configures the LDAP realm.
- B. The system administrator defines and configures the LDAP realm.
- C. The deployer maps the application role USER to the LDAP group people.
- D. The system administrator maps the application role USER to the LDAP group people.

Correct Answer: BC

QUESTION 4

You have been tasked to build a jar file that can be used by a Java SE client to access the remote instance of the OrderProcessingBean. Given the following design:

```
@Remote  
public interface A {  
    public void doSomething();  
    public Order processorOrder(Order o);  
}  
  
@Local  
public interface B {  
    public void doSomethingElse();  
}  
  
public class Order {  
    ...  
}  
  
@Stateless  
public class OrderProcessingBean implements A, B {  
    ...  
}
```

Which classes would need to be included in the client jar file?

- A. B, Order
- B. A, Order
- C. A, B, Order
- D. A, B, Order, OrderProcessingBean

Correct Answer: B

Note:

*

An EJB client JAR file is an optional JAR file that can contain all the class files that a client program needs to use the client view of the enterprise beans that are contained in the EJB JAR file.

*

If all your EJBs are in the same EAR then you can use local interfaces, if not you need remote interfaces.

QUESTION 5

Given the following stateless session bean implementation classes:

```
10. @TransactionAttribute(TransactionAttributeType.MANDATORY)
11. public class MySuper {
12.     public void methodA() {}
13.     public void methodB() {}
14. }

10. @Stateless
11. public class MyBean extends MySuper implements MyInt {
12.     public void methodA() {}
13.
14.     @TransactionAttribute(TransactionAttributeType.REQUIRES_NEW)
15.     public void methodC() {}
16. }

10. @Remote()
11. public interface MyInt {
12.     public void methodA();
13.     public void methodB();
14.     public void methodC();
15. }
```

Assuming no other transaction-related metadata, what are the transaction attributes of methodA, methodB, and methodC respectively?

- A. MANDATORY, MANDATORY , and MANDATORY
- B. REQUIRED, MANDATORY, and REQUIRES_NEW
- C. MANDATORY, MANDATORY , and REQUIRES_NEW

D. REQUIRED, REQUIRES_NEW, and REQUIRES_NEW

Correct Answer: C

Note:

*

You can only bring out the effects of transaction attributes only when you call the method through a session bean instance and NOT through a direct method call. Even if your methods are within the same bean, you need to get the local

instance of the same bean and call through its local interface instead of a direct method invoke.

*

The enum TransactionAttributeType is used with the TransactionAttribute annotation to specify whether the methods of a session bean or message driven bean are called with a valid transaction context.

*

MANDATORY

If a client invokes the enterprise bean's method while the client is associated with a transaction context, the container invokes the enterprise bean's method in the client's transaction context.

*

REQUIRES_NEW

The container must invoke an enterprise bean method whose transaction attribute is set to REQUIRES_NEW with a new transaction context.

Reference: TransactionAttributeType.MANDATORY
