QUESTION 1

An organization has business logic implemented in EJB components. Current clients use container-managed, role-based security to access the business logic using RMI. Management has determined that the business logic must be made available to non-RMI clients using a Web service. Which container-managed Web service security mechanism would the development team use to allow Web service clients to use the current security model? (Choose one)

- A. XKMS
- B. XACML
- C. XML Digital Signature
- D. HTTP Basic Authentication
- E. annotations mapped to the JAX-WS runtime

Correct Answer: D

QUESTION 2

Which security technologies are not included in WS-Security?

- A. encryption
- B. handshake for credential exchange and session establishment
- C. security tokens
- D. digital signatures

Correct Answer: B

QUESTION 3

Given that:

```
<complexType name="MyType">
  <sequence>
    <element name="doc" type="base64Binary" xmlns="http://www.lead4pass.com" xmime:expectedContentTypes="image/jpeg"/>
  </sequence>
</complexType>

// JAXB generated bean for the above type

public class MyType {
    ...

    public X getDoc() {
    }
}
```

Lead4Pass.com

What is X in the above code ? (Choose one)

- A. byte[]
- B. DataHandler
- C. Image
- D. Byte[]

Correct Answer: C

QUESTION 4

Choose the types of Enterprise Beans that can be made into JAX-RS root resources (Choose two):

- A. Stateful Session Beans
- B. Stateless Session Beans
- C. Message-Driven Beans
- D. Singleton Beans

Correct Answer: BD

QUESTION 5

Given the JAX-RS root resource class fragment:

```
@Path("/res")  
@Stateless  
@RolesAllowed({"client"  
class Resource {
```

Choose the statement that best describes the configuration that would be required to support the access control constraint shown:

- A. No further configuration is required - the JavaEE runtime will pick up the security constraint and configure the web container to match.
- B. The developer will have to configure the web container to require authenticated access to the URLs corresponding to this resource, so the proper information can be propagated to the EJB container.
- C. The developer will have to turn on authentication in the web container configuration file, so that all incoming requests are authenticated in order to be processed.
- D. The developer will have to configure the web container to require authenticated access to the URLs corresponding to this resource, and then map web-tier roles to ejb-tier roles, since the JAX-RS and EJB runtimes cannot use the same set of roles.

Correct Answer: B
