QUESTION 1

A stateless session bean's business method invokes `EJBContext.setRollBackOnly` and receives an `IllegalStateException`.

Under which of these conditions could this be possible?

- A. The business method is marked with the `MANDATORY` transaction attribute.
- B. The business method is marked with the `NONSUPPORTED` transaction attribute.
- C. This is NOT possible; a stateless session bean cannot invoke `EJBContext.setRollBackOnly`.
- D. The bean has no metadata (in annotations or deployment descriptor) which specifies the transaction attribute for the method.

Correct Answer: B

QUESTION 2

Given the following code:

```
public void create () {  
    try {  
        doA () {  
        } catch (PersistenceException e) {}  
        try (doB ());  
        } catch (PersistenceException e) {}  
    }  
}
```

Calling method `doA` will cause a `NonUniqueResultException` to be thrown. Calling method `doB` will cause an `EntityExistsException` to be thrown.

What two options describe what will happen when the `create` method is called within an application that uses container managed transactions? (Choose two)

- A. Method `doB` will never be called.
- B. The current transaction will continue after `doA` executes.
- C. The current transaction will continue after `doB` executes.
- D. The current transaction will be marked for rollback when `doA` is called.
- E. The current transaction will be marked for rollback when `doB` is called.

Correct Answer: CE

QUESTION 3

A session bean business method invokes `UserTransaction.setRollbackOnly` and receives an `IllegalStateException`. Under which circumstance can this happen?

- A. The bean is using bean-managed transactions regardless of whether there is an active transaction.
- B. There is no circumstance that would cause `setRollbackOnly` to throw an `IllegalStateException`.
- C. The bean is using bean managed transaction demarcation, and `userTransaccion.begin` has been invoked.
- D. The `setRollbackOnly` method is invoked within a bean-managed transaction, and `userTransaction.commit` has NOT been invoked.

Correct Answer: C

QUESTION 4

Given the following stateless session bean implementation classes:

```
10. @TransactionAttribute(TransactionAttributeType.MANDATORY)
11. public class MySuper {
12.     public void methodA() {}
13.     public void methodB() {}
14. }

10. @Stateless
11. public class MyBean extends MySuper implements MyInt {
12.     public void methodA() {}
13.
14.     @TransactionAttribute(TransactionAttributeType.REQUIRES_NEW)
15.     public void methodC()
16. }

10. @Remote()
11. public interface MyInt {
12.     public void methodA();
13.     public void methodB();
14.     public void methodC();
15. }
```

Assuming no other transaction-related metadata, what are the transaction attributes on `methodB`, and `methodC` respectively?

- A. MANDATORY, MANDATORY, and MANDATORY
- B. REQUIRED, MANDATORY, and REQUIRES_NEW
- C. MANDATORY, MANDATORY,
