- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

QUESTION 1

Which two plug-in spots can call the rating functionality using base package-supplied algorithm types? (Choose two.)

- A. Adjustment Type - Adjustment FT Creation
- B. Billable Charge Template
- C. Bill Segment Type - Bill Segment Create
- D. Adjustment Type - Generate
- E. Bill Segment Type - Bill Segment FT Creation

Correct Answer: AE

QUESTION 2

What can cause a bill segment to have multiple bill calculation headers?

- A. multiple Rate Version Calculation Group
- B. multiple Scheduled Read Dates covered by the bill period
- C. proration at Bill Factor level
- D. multiple service agreements being covered by a bill segment
- E. proration at Calculation Rules level

Correct Answer: C

QUESTION 3

Measuring components are either subtractive or consumptive. Which statement correctly describes these two concepts?

- A. Subtractive measuring components are associated only with water service, whereas consumptive measuring components are for gas and electric services.
- B. Subtractive measuring components are used to measure demand, whereas consumptive measuring components are used to measure how much was consumed since the previous reading.
- C. Subtractive measuring components are associated with deductive meters, whereas consumptive measuring components are not.
- D. A subtractive measuring component's consumption for a given period of time is the end measurement minus the start measurement. A consumptive measuring component's consumption is simply the measurement itself, and represents the consumption for the period of time since the previous measurement was taken.

Correct Answer: B

QUESTION 4

Your client has the following requirements:

Many customers are installing their own solar electrical generation equipment. When these customers generate more electricity than required for their own use, the surplus can be exported back to the power grid.

In order to measure this generation, we have installed special scalar devices. These devices have separate registers to measure the energy generated (export) and the energy received (import) from the National Grid. Both reads will be stored in kWh, but the import is subtractive and export is consumptive.

What solution should you choose to configure the measuring component types for these specific requirements?

- A. Create two service points: one for subtractive import and the other for consumptive export.
- B. Create one new measuring component type for creating two measuring components (one for import and the other for export) that will be linked to one scalar device.
- C. Create one new measuring component type for creating a new measuring component that will be linked to two different scalar devices (one for import and the other for export).
- D. Create two new measuring component types (one for subtractive import and the other for consumptive export) to enable the creation of two measuring components that will be linked to one scalar device.

Correct Answer: D

QUESTION 5

Which major entities hold the key geographic, demographic, and financial information related to a customer who is financially responsible for a property?

- A. Account, Bill, Customer Class, Premise, Service Agreement
- B. Account, Bill, Premise, Service Agreement, Service Port
- C. Account, Person, Premise, Service Agreement, Service Port
- D. Account, Customer Class, Person, Premise, Service Agreement
- E. Account, Customer Class, Premise, Service Agreement, Service Port

Correct Answer: C
