-  **800,000+** Satisfied Customers

### QUESTION 1

A router has two Fast Ethernet interfaces and needs to connect to four VLANs in the local network. How can you accomplish this task, using the fewest physical interfaces and without decreasing network performance?

- A. Use a hub to connect the four VLANs with a Fast Ethernet interface on the router.
- B. Add a second router to handle the VLAN traffic.
- C. Add two more Fast Ethernet interfaces.
- D. Implement a router-on-a-stick configuration.

Correct Answer: D

A router on a stick allows you to use sub-interfaces to create multiple logical networks on a single physical interface.

---

### QUESTION 2

What are the alert messages generated by SNMP agents called?

- A. TRAP
- B. INFORM
- C. GET
- D. SET

Correct Answer: AB

A TRAP is a SNMP message sent from one application to another (which is typically on a remote host). Their purpose is merely to notify the other application that something has happened, has been noticed, etc. The big problem with TRAPs is that they're unacknowledged so you don't actually know if the remote application received your oh-so-important message to it. SNMPv2 PDUs fixed this by introducing the notion of an INFORM, which is nothing more than an acknowledged TRAP.

---

### QUESTION 3

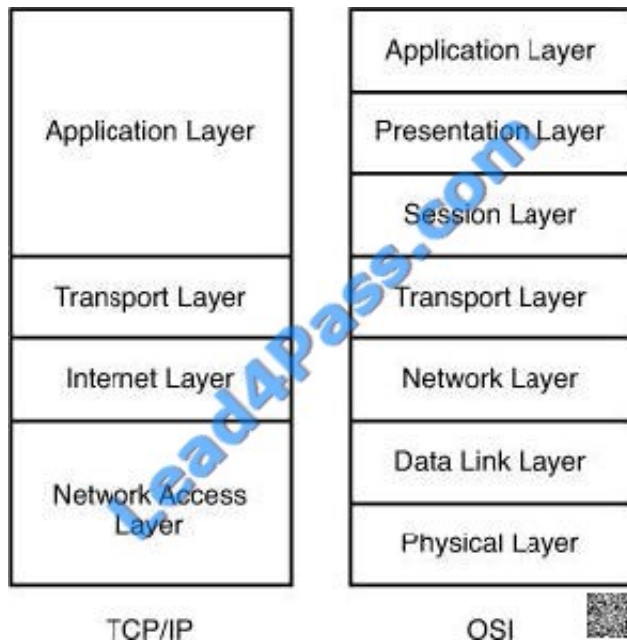

Where does routing occur within the DoD TCP/IP reference model?

- A. application
- B. internet
- C. network
- D. transport

Correct Answer: B

The picture below shows the comparison between TCP/IP model and OSI model. Notice that the Internet Layer of TCP/IP is equivalent to the Network Layer which is responsible for routing decision.

#### QUESTION 4

Which command can you enter to set the default route for all traffic to an interface?

- A. `router(config)#ip route 0.0.0.0 0.0.0.0 GigabitEthernet0/1`
- B. `router(config)#ip route 0.0.0.0 255.255.255.255 GigabitEthernet0/1`
- C. `router(config-router)#default-information originate`
- D. `router(config-router)#default-information originate always`

Correct Answer: A

#### QUESTION 5

Which two of these statements are true of IPv6 address representation? (Choose two.)

- A. There are four types of IPv6 addresses: unicast, multicast, anycast, and broadcast.
- B. A single interface may be assigned multiple IPv6 addresses of any type.
- C. Every IPv6 interface contains at least one loopback address.
- D. The first 64 bits represent the dynamically created interface ID.
- E. Leading zeros in an IPv6 16 bit hexadecimal field are mandatory.

Correct Answer: BC

A single interface may be assigned multiple addresses of any type (unicast, anycast, multicast).

Every IPv6-enabled interface must contain at least one loopback and one link-local address.

Optionally, every interface can have multiple unique local and global addresses.
