QUESTION 1

What mechanism does collectd use to gather monitoring information on systems?

A. It uses a library of plugins.

B. A master server connects to a collectd service on each machine to retrieve the information.

C. It collects its own information on each server and sends that to a master server.

D. It makes SNMP queries to the clients being monitored.

Correct Answer: A

QUESTION 2

A database application requires a maximum shared memory segment (shmmax) of 2GB (2147483648

Bytes).

Which configuration file should be modified to set this kernel parameter permanently? (Specify the full

name of the file, including path.)

Correct Answer: /etc/sysctl.conf

/etc/sysctl.conf

QUESTION 3

Why is the root file system mounted read-only during boot and remounted with write permission later on?

A. Because if problems with the root file system are detected during the boot, fsck can be run, without risk of damage.

B. Because this way crackers cannot collect information about root with boot sniffers.

C. To avoid writing to the disk, unless the root password is known.

D. To avoid other operating systems overwriting the Linux root partition.

E. Because the disk has its own write protection that cannot be changed by the operating system.

Correct Answer: A

QUESTION 4

Which program lists information about files and network connections opened by processes? (Specify ONLY the

command without any path or parameters.)

Correct Answer: lsof

lsof, /usr/bin/lsof

QUESTION 5

What is the device name for the first SCSI tape drive on a system when used without automatic rewinding after each write operation? (Please specify the full path to the device.)

Correct Answer: /dev/nst0
