QUESTION 1

If a client's browser does not accept cookies, what occurs when the client connects to a virtual server using cookie persistence?

- A. The connection request is not processed.
- B. The connection request is sent to a policy server.
- C. The connection request is loadbalanced to an available pool member.
- D. The connection request is refused and the client is sent a "server not available" message.

Correct Answer: C

QUESTION 2

A BIG-IP Administrator uses a device group to share the workload and needs to perform service on a BIG-IP device currently active for a traffic group. The administrator needs to enable the traffic group to run on another BIG-IP device in the device group. What should the administrator do to meet the requirement?

- A. Create a new Traffic Group and then fail to Standby Unit
- B. Select Traffic Group and then select Failover
- C. Select Traffic Group and then select Force to Standby
- D. Select Traffic Group on Primary Unit and then select Demote

Correct Answer: C

QUESTION 3

The owner of a web application asks the BIG-IP Administrator to change the port that the BIG-IP device sends traffic to. This change must be made for each member in the server pool named app_pool for their Virtual Server named app_vs. In which area of the BIG-IP Configuration Utility should the BIG-IP Administrator make this change?

- A. Local Traffic > Pools
- B. Local Traffic > Nodes
- C. Network > Interfaces
- D. Local Traffic > Virtual Servers

Correct Answer: A

QUESTION 4

A BIG-IP system has the following configuration:

*

SNAT is set to Auto Map

*

There are two VLANs internal and external

*

Default route is pointed to the gateway on external VLAN

*

Self P for internal VLAN is 192.1.1.2

*

Self IP for external VLAN is 192.1.2.2

*

Floating IP addresses for internal VLAN is 192.1.1.1

*

Floating IP addresses for external VLAN is 192.1.2.1

*

The Virtual Server IP address is 192.1.1.100

Which IP address does the BIG-IP system use first when traffic reaches the servers on the internal VLAN?

A.

192.1.1.100

B.

192.1.2.2

C.

192.1.1.1

D.

192.1.2.1

Correct Answer: C

QUESTION 5

Assuming other failover settings are at their default state, what would occur if the failover cable were to be disconnected for five seconds and then reconnected?

- A. As long as network communication is not lost, no change will occur.
- B. Nothing. Failover due to loss of voltage will not occur if the voltage is lost for less than ten seconds.
- C. When the cable is disconnected, both systems will become active. When the voltage is restored, unit two will revert to standby mode.
- D. When the cable is disconnected, both systems will become active. When the voltage is restored, both systems will maintain active mode.

Correct Answer: C
