An intrusion detection system begins receiving an abnormally high volume of scanning from numerous sources. Which evasion technique does this attempt indicate?

- A. traffic fragmentation

- B. resource exhaustion
- C. timing attack
- D. tunneling

Correct Answer: B

QUESTION 5

What are the four characteristics of an SOC runbook? (Choose four.)

- A. A runbook is a collection of plays, and each play generates a report from some set of data sources.
- B. The runbook describes the security architecture and technical details of protective measures.
- C. Instead of being a rigid framework that stifles creativity, the open-ended nature of the runbook allows security analysts to document ideas and explore ways of achieving objectives.
- D. The runbook is a living document that is always up to the task of handling tomorrow's security challenges.
- E. Plays should also evolve over time as attack methods evolve.
- F. The runbook is a fixed set of standard operating procedures that cannot be changed easily.

Correct Answer: ACDE
