QUESTION 1

What is the difference between a handle and pointer?

- A. A handle is an abstract reference to a value, whereas a pointer is a direct reference.
- B. A pointer is an abstract reference to a value, whereas a handle is a direct reference.
- C. A pointer is a reference to a handle.
- D. A handle is a reference to a pointer.

Correct Answer: A

QUESTION 2

Which one of these protocols requires a connection to be established before transmitting data?

- A. TCP
- B. UDP
- C. IP
- D. OSPF

Correct Answer: A

QUESTION 3

Which two statements best explain why domain shadowing is difficult to detect? (Choose two.)

- A. The created subdomains are numerous, short lived, and random, with no discernible patterns.
- B. The attacker gains admin access to a legitimate domain, and uses that legitimate domain to register many shady subdomains.
- C. The attacker rapidly rotates a single domain to a large list of IP addresses, to avoid detection.
- D. The exploit kit landing page subdomains are usually active for a long time and branched into using both third-level and fourth-level domains (for example, brandmuellergeifiseer.astarentals.co.uk).

Correct Answer: AB

QUESTION 4

Which of the following services are provided by a lightweight access point? (Select all that apply.)

- A. Channel encryption

B. Transmission and reception of frames

C. Client authentication

D. Quality of Service

Correct Answer: AB

QUESTION 5
