QUESTION 1

Under which circumstance should the ManageFaults service group attribute be set to NONE?

- A. to turn off manual control of a service group
- B. to prevent a hung resource from stopping a failover
- C. to help in problem analysis when a resource faults
- D. to place the resource in a STALE_ADMIN_WAIT state

Correct Answer: C

QUESTION 2

A two-node Veritas Cluster with I/O fencing configured has two service groups running, one on each node. What happens when all heartbeat links are lost simultaneously?

- A. All service groups remain where they are.
- B. All nodes race for the data disks, and one node panics.
- C. All nodes race for the coordinator disks, and one node panics.
- D. All service groups fault and shut down.

Correct Answer: C

QUESTION 3

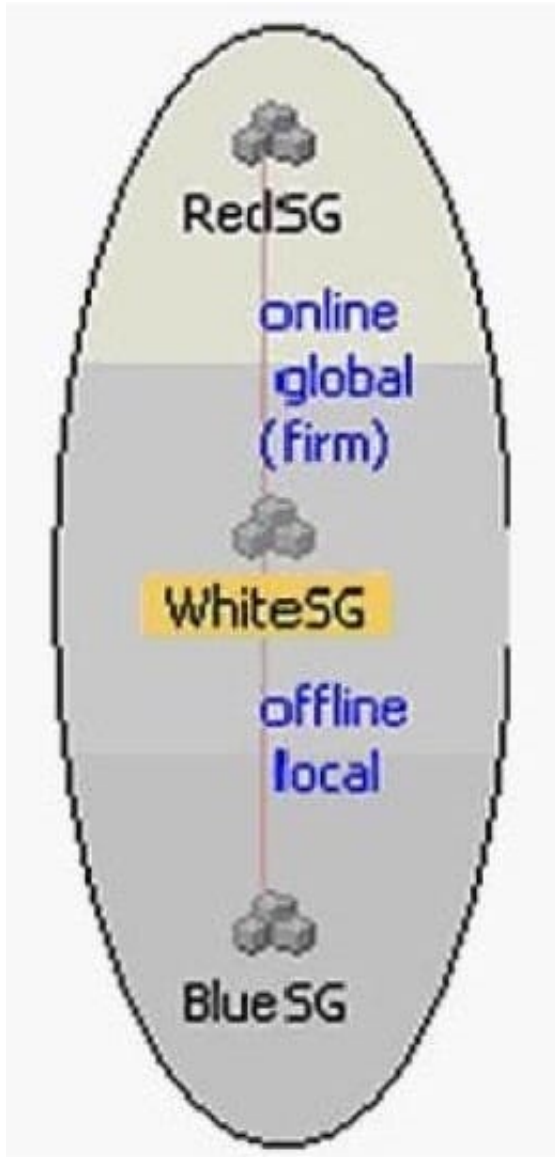

In a Veritas cluster, when all high priority links fail, the low priority links are promoted to high priority in which manner?

- A. in order as they appear in /etc/lfttab
- B. in order by NIC name
- C. all simultaneously regardless of number
- D. one at a time as required

Correct Answer: C

QUESTION 4

What is a purpose of running a virtual fire drill?

- A. To test that a specific system in the cluster is a viable failover target
- B. To test disaster recovery by switching the service group to the failover target
- C. To carry out the one-time configuration tasks required for the service group
- D. To test the service group configuration by copying it into the VCS Simulator

Correct Answer: A

QUESTION 5

An application is started and stopped using custom scripts and consists of a single running daemon process. Which type of resource is recommended to cluster this application?

- A. Process

B. Program

C. Application

D. Init

Correct Answer: C
